MARICOPA COUNTY DUST CONTROL FORECAST

ISSUED Thursday, October 8, 2015

Five-day weather outlook:

Nothing has changed from yesterday's forecast. The upper-level low is still on track to move south and remain over Baja for the next week or so. In doing so, moisture transport will likely begin to increase early next week. Therefore, the possibility of more rain still looms in the air. However, in the meantime, we'll be in a down period. Light winds in the Valley should keep the threat of dust at Low.

Check back tomorrow for more! Until then, have a good day!

R I S K F A C T O R S
