Re: *Third Quarter Status Report for 2006*
LUST File #0393.02-.10, .15
Facility ID #0-002227

Dear Mr. Lucas:

Honeywell is submitting this *Third Quarter Status Report for 2006* in accordance with requirements in the Arizona Department of Environmental Quality's (ADEQ) *Corrective Action Plan Final Approval* letter dated October 7, 2005.

On September 15, 2006, Honeywell submitted a letter to ADEQ proposing to modify the scheduled submittal dates of quarterly status reports such that they be submitted to ADEQ no later than 60 days following the end of each calendar quarter. ADEQ approved the requested CAP modification in a letter to Honeywell dated September 28, 2006. This quarterly status report represents the first to be submitted under the modified schedule requirements.

If you should have any questions or require discussion, please contact me at 973-455-4279 or Jeff Mieth at 480-377-6265. For your convenience, my e-mail address is troy.j.meyer@honeywell.com and Jeff's is jeffrey.mieth@ch2m.com.

Sincerely,

Troy J. Kennedy

SECTION 1.0

Introduction

1.1 Scope and Purpose

This quarterly status report summarizes ongoing contaminant characterization and remediation activities conducted during third quarter 2006, for LUST File Nos. 0393.02-.10, .15, Facility ID No. 0-002227, Honeywell 34th Street Facility (Facility or Honeywell facility). This report also incorporates groundwater monitoring results received during the third quarter of 2006 associated with second quarter 2006 sampling activities.

This report is being submitted pursuant to reporting requirements in the Arizona Department of Environmental Quality's (ADEQ) letter dated October 7, 2005 (ADEQ 2005), issuing final approval of Honeywell's Corrective Action Plan (CAP) (CH2M HILL 2004a-b) and in accordance with the schedule modification noted below.

On September 15, 2006, Honeywell International Inc. (Honeywell) submitted a letter to ADEQ proposing to modify the scheduled submittal dates of quarterly status reports (Honeywell 2006a). The modification was proposed to align the quarterly status reports with the appropriate quarterly groundwater quality sampling events. ADEQ approved the requested CAP modification in a letter to Honeywell dated September 28, 2006 (ADEQ 2006b). The modified CAP now requires periodic status reports to be submitted no later than 60 days following the end of each calendar quarter. This quarterly status report represents the first to be submitted under the modified schedule requirements.

1.2 Background

The Honeywell facility is located within Operable Unit 2 of the Motorola 52nd Street Superfund Site at 111 South 34th Street in Phoenix, Arizona. Figure 1-1 illustrates the Facility location and layout. The Honeywell facility has been used as a manufacturing and testing facility for the production of aircraft engines and auxiliary equipment since 1951.

The United States Environmental Protection Agency (USEPA) and ADEQ Superfund Programs Section are currently overseeing the characterization and remediation of soil and groundwater contaminated with chlorinated compounds within the Superfund site. ADEQ has been delegated the lead for facility investigations within OU2, including the Honeywell facility. During the Superfund investigation, petroleum hydrocarbons were detected at the Honeywell facility, and a parallel investigation was initiated under the ADEQ Underground Storage Tank (UST) Corrective Action Section. Since that time, Honeywell has investigated the extent of contamination, initiated corrective actions to recover free product, and developed a CAP. The approved CAP (CH2M HILL 2004a-b) recommends the following remedial actions:

- Remediate soil contamination in the vadose zone, the free-phase hydrocarbon smear zone, and the free-phase hydrocarbon pool with bioenhanced soil-vapor extraction (BSVE).
- Supplement BSVE remediation by selectively removing free product from existing groundwater monitoring wells.
- Treat the remaining dissolved-phase groundwater contamination with monitored natural attenuation after aggressive source removal is complete. ADEQ is withholding approval of this remediation technology pending completion of free-product removal to the maximum extent practicable (ADEQ 2005).

1.3 Summary of Activities

This quarterly status report summarizes the activities conducted or completed as part of the UST corrective action between July 2006 and September 2006:

- Honeywell completed the second quarter 2006 groundwater sampling event on July 12, 2006. As reported in the *Second Quarter Status Report for 2006*, the second quarter sampling event was completed in July because access to the monitoring wells on Sky Harbor Airport property for the quarterly sampling event was not available until June 28, 2006.
- Honeywell conducted the third and final round of monthly groundwater sampling at monitoring wells ASE-125A and ASE-126A, located on Phoenix Sky Harbor International Airport property (Sky Harbor Airport property), on July 19, 2006.
- Honeywell conducted the third quarter 2006 groundwater sampling event between September 11 and September 25, 2006.
- Honeywell conducted three monthly water-level measurements and three additional rounds of free-product-specific monitoring/recovery during third quarter 2006. As described in Section 2.1, the free-product monitoring/recovery schedule is based on the measured free-product thicknesses in individual monitoring wells in accordance with the *LUST Field Sampling Plan – Groundwater Sampling, Free Product Monitoring and Recovery Plan* (CH2M HILL 2005a).
- Honeywell continued monthly monitoring of 13 Sky Harbor Airport subsurface utility vaults for oxygen (O_2), carbon dioxide (CO_2), methane, and percent of lower explosive limit (%LEL).
- Honeywell continued helium gas tracer tests between July 4 and July 12, 2006 and between September 14 and September 29, 2006 to determine well dilution effects from ambient air during soil-gas sampling at selected monitoring wells.

SECTION 2.0

Site Characterization Activities

This section describes groundwater and free-product data collected as part of Honeywell's ongoing UST monitoring program. Because there were no additional monitoring wells installed or associated soil samples collected during the reporting period (July 1, 2006 to September 30, 2006), this section does not include a discussion of soil data. For a discussion of historical soil data, see the *First Quarter Status Report for 2006, Honeywell 34th Street Facility, Facility ID No. 0-002227, LUST File Nos. 0393.02-.10, .15* (CH2M HILL 2006a). Groundwater data presented in this section were generated from samples collected during the second and third quarter groundwater sampling rounds conducted in June/July 2006 and in September 2006, in accordance with the *LUST Field Sampling Plan – Groundwater Sampling, Free Product Monitoring and Recovery Plan* (CH2M HILL 2005a).

Consistent with Honeywell's *Site Characterization Report Update – October 2005* (CH2M HILL 2005b), this section presents a discussion of dissolved-phase contaminant concentrations and distribution, along with associated plan view plots, of:

- Benzene.
- Methyl-tert-butyl-ether (MTBE).
- Naphthalene.
- Benzo(a)pyrene.
- Total benzene, toluene, ethylbenzene, and xylenes (BTEX).
- Total recoverable petroleum hydrocarbons (TRPH).
- Total volatile organic compounds (VOCs).
- Total non-fuel VOCs.
- Total trichloroethylene (TCE).
- Total 1,1,1-trichloroethane (TCA).

This section also discusses free-product thickness measurements collected on September 6 and 7, 2006, and the historical maximum free-product thicknesses measured in Honeywell's UST monitoring wells since free product was first encountered in a monitoring well at the Facility in 1999. Data regarding Honeywell's free-product recovery efforts and recovered product volumes through third quarter 2006 are presented in Section 3.0.

2.1 Free Product

Historically, free product has been observed in 29 monitoring wells located on the Honeywell facility and Sky Harbor Airport property. As discussed below, during this reporting period, free product was observed for the first time in monitoring well ASE-91A. Honeywell monitors the thickness of free product in these and other monitoring wells near the free-product pool either monthly or biweekly. The monitoring schedule is based on the measured free-product thicknesses and is in accordance with the *LUST Field Sampling Plan – Groundwater Sampling, Free Product Monitoring and Recovery Plan* (CH2M HILL 2005a). In general, any monitoring well with a free-product thickness less than 0.1 foot is measured

monthly, and any monitoring well with a free-product thickness greater than 0.1 foot is measured biweekly. During the reporting period, monitoring wells ASE-19A, ASE-52A, ASE-55A, ASE-111A, and ASE-115A were measured biweekly as indicated in Table 2-1.

Free-product thicknesses are illustrated in this quarterly status report for measurements collected on September 6 and 7, 2006 (the last complete monitoring round of the reporting period), as well as the historical maximum thicknesses. Table 2-1 provides free-product thickness measurements collected during the reporting period for all monitoring wells where free product has been observed historically.

On September 6 and 7, 2006, Honeywell observed free product in eight monitoring wells located on its property and Sky Harbor Airport property, as shown on Figure 2-1. Except for monitoring well ASE-91A, these monitoring wells had previously contained free product at thicknesses greater than those measured on September 6 and 7, 2006. The September 6, 2006 free-product thickness measurement of 0.02 foot represented the maximum thickness observed in monitoring well ASE-91A (Table 2-1). On September 6 and 7, 2006, the maximum free-product thickness observed in any monitoring well was 0.08 foot in monitoring wells ASE-67A, ASE-89A, and ASE-107A (Figure 2-1). The free-product thicknesses in monitoring wells ASE-67A, ASE-89A, and ASE-107A on September 6 and 7, 2006 were less than the maximum free-product thicknesses observed in those wells to date. It should be noted that an automated free-product skimmer system is currently installed in monitoring well ASE-67A, which controls the free-product thickness in the well. Therefore, the reported free-product thicknesses for monitoring well ASE-67A do not represent equilibrium conditions.

A comparison to the previous quarter's free-product thickness measurements (collected on June 21, 2006) shows that, in general, free-product thicknesses in September 2006 were slightly higher than those measured in June 2006 for wells containing product during both measurements (CH2M HILL 2006b). Of the eight monitoring wells containing free product on September 6 and 7, 2006, the thickness of product decreased in two wells (ASE-67A and ASE-111A) and increased in six wells (ASE-51A, ASE-89A, ASE-91A, ASE-102A, ASE-107A, and ASE-115A) from the measurements collected on June 21, 2006. Free product was encountered in monitoring well ASE-91A on September 6, 2006; this well did not contain free product on June 21, 2006 (free product was first encountered in monitoring well ASE-91A on July 19, 2006). Conversely, free product was not encountered on September 6, 2006 in three monitoring wells (ASE-19A, ASE-52A, and ASE-55A); these wells each contained free product during the previous quarter's monitoring round on June 21, 2006 (CH2M HILL 2006b).

The September 2006 free-product thickness measurements indicate that the free product is currently limited to three separate areas similar to the previous reporting period (Figure 2-1). North of Air Lane on the Honeywell facility, free product was detected in monitoring wells ASE-51A, ASE-67A, ASE-111A, and ASE-115A. South of Air Lane on the Honeywell facility, free product was detected in monitoring well ASE-91A located in the central portion of the area associated with the CAP. On Sky Harbor Airport property, free product was detected in monitoring wells ASE-89A, ASE-102A, and ASE-107A. Each of these free-product areas is delineated further by monitoring wells that did not contain free product (Figure 2-1).

Free product has now been observed historically in 30 different monitoring wells (29 historical, plus monitoring well ASE-91A during this reporting period) located on the Honeywell facility and Sky Harbor Airport property. The maximum free-product thickness measured in any of these wells since April 1999, when free product was first encountered in a monitoring well at the Honeywell facility, was 4.52 feet in monitoring well ASE-67A on July 26, 2005 (Figure 2-2). The maximum free-product thickness for monitoring well ASE-91A (0.02 foot, September 6, 2006) was measured during third quarter 2006, as shown in Table 2-1 and on Figure 2-2.

The historical free-product thickness measurements show that the cross-gradient extent of the free-product pool can be defined historically by groundwater monitoring wells ASE-54A and ASE-66A to the northwest and by monitoring wells BC-7A and ASE-127A to the southeast. The upgradient (northeast) extent of the free-product pool can be delineated by monitoring wells ASE-59A, ASE-60A, and ASE-61A. According to the historical thickness measurements, the downgradient (south-southwest) extent of the free-product pool can be defined by monitoring wells ASE-58A, ASE-46A, ASE-65A, ASE-126A, ASE-97A, BC-8B, ASE-95A, ASE-124A, ASE-100A, ASE-101A, ASE-128A, ASE-98A, ASE-99A, ASE-110A, ASE-109A, ASE-123A, ASE-122A, ASE-112A, and ASE-105A (Figure 2-2).

2.2 Groundwater – Second Quarter 2006

In accordance with Honeywell's *LUST Field Sampling Plan – Groundwater Sampling, Free Product Monitoring and Recovery Plan* (CH2M HILL 2005a), Honeywell performs quarterly evaluations of the groundwater quality in the area associated with the CAP. In addition, Honeywell measures groundwater levels in monitoring wells associated with the CAP monthly, as presented in the above-referenced plan (CH2M HILL 2005a). As part of the focused remedial investigation of the Honeywell facility, groundwater levels are also measured quarterly in all other Honeywell groundwater monitoring wells. An evaluation of the groundwater levels and associated groundwater flow directions in June 2006, in the area associated with the CAP, was presented in the *Second Quarter Status Report for 2006* (CH2M HILL 2006b). However, results from the second quarter 2006 groundwater sampling event were not available prior to production of the *Second Quarter Status Report for 2006* and therefore, they have been included in this third quarter status report for 2006. Because of the inclusion of the second quarter groundwater quality results in this third quarter status report, the second quarter groundwater levels and associated groundwater flow directions (as discussed in the *Second Quarter Status Report for 2006*) have also been included in this report for completeness. Hydrographs illustrating water level elevations over time for each of Honeywell's UST monitoring wells are included as Appendix A.

Sixty-two monitoring wells were sampled as part of the quarterly UST monitoring program between June 28 and July 12, 2006. Analytical results from these monitoring wells are presented in this quarterly status report on plan view maps and discussed below. Complete laboratory analytical and data validation reports are contained in Appendix B.

This section includes plan view maps with posted water quality data for:

- Benzene.
- MTBE.

- Naphthalene.
- Benzo(a)pyrene.
- Total BTEX.
- TRPH.
- Total VOCs.
- Total non-fuel VOCs.
- Total TCE.
- Total TCA.

Concentration contours are presented along with the posted data for the individual compounds (benzene, MTBE, naphthalene, and benzo(a)pyrene). These contours delineate areas exceeding regulatory standards and laboratory detection limits.

2.2.1 Water Level Elevations

Groundwater elevations for all monitoring wells at and near the Honeywell facility were measured on June 21, 2006. These elevations and associated groundwater level contours are presented on Figure 2-3 for the eastern portion of the Honeywell facility and Sky Harbor Airport property. Similar to previous time periods, the direction of groundwater flow in this area was to the south-southwest, as shown on Figure 2-3. As presented in the *Second Quarter Status Report for 2006* (CH2M HILL 2006b), a comparison of water-level elevations collected in March and June 2006 showed that water levels rose in every monitoring well associated with the CAP. The rise in water-level elevation between March and June 2006 ranged from 0.41 foot (ASE-56A) to 1.84 feet (ASE-123A), with an average rise of approximately 0.92 foot. A discussion of possible causes for the rising water levels in the area associated with Honeywell's CAP is presented in Section 2.3.1.

2.2.2 Benzene

Benzene was detected in groundwater throughout the eastern portion of the Honeywell facility and onto Sky Harbor Airport property in June/July 2006, generally consistent with the historical areal extent of the free-product pool. The maximum concentration of benzene in June/July 2006 occurred in monitoring well ASE-115A (4,200 micrograms per liter [µg/L]), as shown on Figure 2-4. This concentration was higher than the previous quarter's maximum of 2,300 µg/L, which occurred in monitoring well ASE-63A. Consistent with the data from March 2006, the highest benzene concentrations in June/July 2006 occurred in monitoring wells associated with the Area 2 fuel farm (ASE-115A, 4,200 µg/L; ASE-63A, 3,000 µg/L; ASE-116A, 770 µg/L; ASE-38A, 850 µg/L; ASE-39A, 640 µg/L). Concentrations of benzene exceeding the USEPA maximum contaminant level (MCL) of 5 µg/L were detected both at the Honeywell facility and beneath the northern portion of Sky Harbor Airport in June/July 2006 (Figure 2-4).

In general, the June/July 2006 benzene concentrations were lower than those in March 2006, with some increases observed in monitoring wells on both the Honeywell and Sky Harbor Airport properties. Most significant of these increases was the concentration of benzene of 4,200 µg/L in monitoring well ASE-115A, compared to a concentration of 680 µg/L in this monitoring well in March 2006. This increase in benzene concentration can be attributed to the localized presence of free product, which was observed in monitoring well ASE-115A for the first time on April 5, 2006 (subsequent to the March sampling event). Of similar

significance was the lack of detection of benzene in monitoring well ASE-97A in June/July 2006. This was notable because benzene was detected in March 2006 in monitoring well ASE-97A at a concentration of 32 µg/L (benzene was not detected in the regular sample, only in the field duplicate in March 2006). The detection of benzene in monitoring well ASE-97A in March 2006 was the only instance that benzene had ever been detected in this monitoring well. The historical data and the June/July 2006 data suggest that the detection of benzene in the field duplicate for monitoring well ASE-97A during the March 2006 sampling event was anomalous. The benzene concentration in monitoring well ASE-112A decreased from the March 2006 concentration of 260 µg/L to 120 µg/L in June/July 2006. The benzene concentration in the June/July 2006 field duplicate sample for monitoring well ASE-112A (110 µg/L) was in general agreement with the regular sample (120 µg/L), unlike the March 2006 samples, where the regular sample contained a benzene concentration of 260 µg/L, and the field duplicate did not contain detectable levels of benzene (<1 µg/L). The June/July 2006 data from monitoring well ASE-112A suggests that the field duplicate result (<1 µg/L) from March 2006 was anomalous.

Given the south-southwesterly direction of groundwater flow in the area, the extent of benzene concentrations exceeding the MCL is delineated in all directions. The upgradient (northeast) extent is delineated by monitoring wells ASE-59A, ASE-60A, and ASE-61A; the cross-gradient extent is delineated by monitoring wells PL-2101, ASE-66A, and ASE-54A to the northwest and by monitoring wells ASE-127A and BC-7A to the southeast (Figure 2-4). The downgradient (south-southwest) extent of benzene exceeding the MCL is delineated by monitoring wells ASE-58A, ASE-46A, ASE 62A, ASE-55A, ASE-97A, BC-8B, ASE-92A, ASE-95A, ASE-124A, ASE-96A, ASE-106A, ASE-102A, ASE-114A, and ASE-113A (Figure 2-4). Additional monitoring wells downgradient of the Honeywell facility did not contain detectable levels of benzene, as indicated on Figure 2-4.

2.2.3 Methyl Tert-butyl Ether

MTBE was detected in groundwater throughout the eastern portion of the Honeywell facility and onto Sky Harbor Airport property in June/July 2006. The maximum concentration of MTBE in June/July 2006 occurred in monitoring well ASE-89A (1,200 µg/L), located just south of the Honeywell facility on Sky Harbor Airport property, as shown on Figure 2-5. This concentration was slightly higher than the MTBE concentration of 1,000 µg/L detected in this monitoring well in March 2006 but is consistent with the historical MTBE concentrations in this area. The concentration of MTBE in monitoring well ASE-115A increased from 110 µg/L in March 2006 to 1,100 µg/L in June/July 2006. Similar to the increase in benzene concentration in this monitoring well, the increase in MTBE concentration in monitoring well ASE-115A was likely due to the presence of free product that was first encountered following the March 2006 water-quality sampling event. Additional elevated (>500 µg/L) MTBE concentrations of 640 µg/L and 600 µg/L were detected in June/July 2006 south of the Area 2 fuel farm in monitoring wells ASE-63A and ASE-39A, respectively. Monitoring well ASE-106A, located south of monitoring well ASE-89A on Sky Harbor Airport property, also had an elevated (>500 µg/L) MTBE concentration (710 µg/L). Concentrations of MTBE exceeding its ADEQ-recommended Tier 1 remedial level of 94 µg/L—the remedial level that should be used when an existing drinking water receptor is not affected or is not potentially affected by MTBE (ADEQ

2002)—were detected both on the Honeywell facility and beneath the northern portion of Sky Harbor Airport, as shown on Figure 2-5.

Overall, the June/July 2006 sampling results indicated some shifting of the concentrations of MTBE; however, the area that exceeded the Tier 1 remedial level of 94 µg/L remained generally similar to the previous quarter. One monitoring well (ASE-38A) whose MTBE concentration exceeded 94 µg/L in March 2006 (140 µg/L) did not exceed that standard in June/July 2006 (86 µg/L). Conversely, there was only one monitoring well (ASE-95A, located on Sky Harbor Airport property) whose March 2006 concentration (53 µg/L) was less than 94 µg/L but whose June/July 2006 concentration (98 µg/L) exceeded the Tier 1 standard. The MTBE concentration in monitoring well ASE-95A of 98 µg/L resulted in extending the Tier 1 remedial standard contour to the west as shown on Figure 2-5.

Concentrations of MTBE in monitoring wells ASE-20A, ASE-91A, ASE-97A, and ASE-114A decreased to below the laboratory detection limit between the March and June/July 2006 sampling events, reducing the extent of the MTBE plume to the west and southeast (Figure 2-5). As discussed in the *Second Quarter Status Report for 2006* (CH2M HILL 2006b), an inconsistency occurred between the March 2006 results of the regular sample and the field duplicate sample for monitoring well ASE-97A. The concentration of MTBE in the field duplicate for monitoring well ASE-97A in March 2006 was 71 µg/L, but the concentration in the regular sample was <5 µg/L. The concentration of MTBE in monitoring well ASE-97A in June/July 2006 was also <5 µg/L, indicating that the detection of MTBE in the field duplicate during the March 2006 sampling event was anomalous. Analytical results from monitoring well ASE-112A, which also had an inconsistency in MTBE concentrations between its March 2006 regular (310µg/L) and field duplicate (<5 µg/L) samples, indicate that the March 2006 field duplicate result of <5 µg/L was anomalous (June/July results were 210 µg/L for the regular sample and 200 µg/L for the field duplicate), consistent with the benzene results.

Given the south-southwesterly direction of groundwater flow in the area, the extent of MTBE concentrations exceeding its Tier 1 remedial level is delineated in all directions. The upgradient (northeast) extent is delineated by monitoring wells ASE-51A, ASE-52A, ASE-53A, ASE-60A, ASE-111A, and ASE-61A; the cross-gradient extent is delineated by monitoring wells ASE-66A, PL-2101, ASE-20A, ASE-56A, and ASE-57A to the northwest and by monitoring wells ASE-38A, PL-101A, ASE-64A, ASE-127A, and BC-7A to the southeast (Figure 2-5). The downgradient (south-southwest) extent of MTBE exceeding its Tier 1 remedial level is delineated by monitoring wells ASE-46A, ASE-62A, ASE-55A, ASE-108A, PL-105A, ASE-91A, BC-8B, ASE-90A, ASE-125A, ASE-124A, ASE-96A, ASE-101A, ASE-102A, ASE-107A, and ASE-113A (Figure 2-5). Additional monitoring wells downgradient of the Honeywell facility did not contain detectable levels of MTBE, as indicated on Figure 2-5.

In December 2005, the MTBE concentration in monitoring well ASE-95A exceeded the ADEQ-recommended investigation level of 20 µg/L. This prompted Honeywell to install monitoring well ASE-125A, located on Sky Harbor Airport property approximately 600 feet west of monitoring well ASE-95A, in January 2006. MTBE was not detected in monitoring well ASE-125A in either March or June/July 2006. Based on the June/July 2006 data, the extent of the MTBE plume on Sky Harbor Airport property was delineated to ADEQ's investigative level of 20 µg/L by monitoring wells BC-8B, ASE-97A, ASE-125A, ASE-103A, ASE-100A, and ASE-124A to the west and by monitoring wells ASE-101A, ASE-128A,

ASE-98A, ASE-99A, ASE-102A, ASE-110A, ASE-107A, ASE-114A, ASE-109A, ASE-123A, ASE-122A, and ASE-113A to the south (Figure 2-5).

2.2.4 Naphthalene

Naphthalene was detected in groundwater throughout the eastern portion of the Honeywell facility and onto Sky Harbor Airport property, generally consistent with the extent of the free-product pool, although the extent of naphthalene was not as far to the south. The maximum concentration of naphthalene in June/July 2006 occurred in monitoring well ASE-57A (300 µg/L), located in the parking lot north of Air Lane, as shown on Figure 2-6. This monitoring well represents the only location where the naphthalene concentrations exceeded the health-based guidance level of 280 µg/L in June/July 2006. The naphthalene concentration in monitoring well PL-101A exceeded the health-based guidance level in March 2006 (290 µg/L), but the concentration in this well dropped below this standard in June/July 2006 (170 µg/L). Other detectable concentrations of naphthalene in June/July 2006 ranged from 2.5 µg/L (ASE-92A) to 230 µg/L (ASE-56A). As indicated on Figure 2-6, the area where the naphthalene concentration exceeded the health-based guidance level is limited and defined by the Honeywell UST monitoring well network.

2.2.5 Benzo(a)pyrene

Benzo(a)pyrene was not detected in any monitoring well sampled in June/July 2006, as shown on Figure 2-7.

2.2.6 Total Benzene, Toluene, Ethylbenzene, and Xylenes

Total BTEX consists of the sum of concentrations of benzene, toluene, ethylbenzene, and total xylenes (*meta*, *para*, and *ortho* isomers). BTEX components were detected throughout the area associated with the CAP in June/July 2006, with a maximum total BTEX concentration of 4,972.6 µg/L in monitoring well ASE-115A, as shown on Figure 2-8. Total BTEX concentrations exceeding 500 µg/L were detected in a north-south direction from the Area 2 fuel farm (from monitoring well ASE-115A to the north, to monitoring well ASE-64A to the south), and to the west of the Area 2 fuel farm in monitoring wells ASE-56A (870 µg/L) and ASE-57A (901 µg/L) (Figure 2-8). This was generally the same concentration pattern as the previous quarter (March 2006), although the concentrations detected in June/July 2006 were generally lower. Twenty of the 26 monitoring wells located on Sky Harbor Airport property did not contain detectable levels of BTEX components in June/July 2006 (Figure 2-8).

2.2.7 Total Recoverable Petroleum Hydrocarbons

TRPH consists of the sum of compounds with the carbon range C_{13} to C_{32}. Analysis of TRPH using USEPA Method 8015M (later revised to USEPA Method 8015B) was approved in a letter from ADEQ to Honeywell dated March 7, 2006 (ADEQ 2006a). ADEQ's approval came with the condition that "a demonstration of performance-based measurement should be conducted by the analytical laboratory" and that this information "be performed and submitted with each periodic report." Pertinent information regarding the analysis of TRPH using USEPA Method 8015B was submitted to ADEQ under separate cover along with the *Second Quarter Status Report for 2006* (CH2M HILL 2006b); Honeywell is currently awaiting ADEQ's response to this submittal.

TRPH compounds were detected throughout the area associated with the CAP in June/July 2006, with a maximum TRPH concentration of 77,000 µg/L in monitoring well ASE-55A, as shown on Figure 2-9. TRPH concentrations exceeding 1,000 µg/L were detected in six monitoring wells in June/July 2006, with five of the six wells located on the Honeywell facility. Unlike the BTEX components, the highest TRPH concentrations were not found in the area associated with the Area 2 fuel farm. Rather, the highest concentrations were detected in monitoring wells located downgradient of a known historical fuel release from the original Area 2 fuel farm (southwest corner of Building 230) (Figure 2-9).

Six monitoring wells that did not contain detectable levels of TRPH compounds during the March 2006 sampling event had detections of TRPH during the June/July 2006 round (PL-2101, ASE-127A, ASE-101A, ASE-98A, ASE-110A, and ASE-113A) (Figure 2-9). For the first time, detections of TRPH compounds in monitoring wells ASE-98A (160 µg/L) and ASE-110A (130 µg/L) indicated petroleum hydrocarbon contamination existed in Honeywell's southernmost monitoring wells. Because of these detections, Honeywell expedited the TRPH analysis for the samples collected in September 2006. Those results are discussed in Section 2.3.7. Thirteen of the 26 monitoring wells located on Sky Harbor Airport property did not contain detectable levels of TRPH in June/July 2006.

2.2.8 Total Volatile Organic Compounds

Total VOCs consist of the sum of detected concentrations from the USEPA Method 8260 analyte list. VOCs were detected in the majority of monitoring wells sampled in June/July 2006, with a maximum total VOC concentration of 6,599.1 µg/L in monitoring well ASE-115A, as shown on Figure 2-10. Total VOC concentrations exceeding 750 µg/L were detected in roughly the same pattern and primarily in the same monitoring wells as those containing concentrations of total BTEX greater than 500 µg/L (Figure 2-8), although the extent of total VOCs was slightly further to the south (Figure 2-10). In general, total VOC concentrations were lower in June/July 2006 than in the previous quarter (March 2006), but the extent of detectable VOCs was roughly similar from March 2006 to June/July 2006. Five monitoring wells (ASE-54A, ASE-127A, BC-7A, ASE-102A, and ASE-114A) that contained detectable levels of VOCs in March 2006 did not contain detectable levels of VOCs in June/July 2006. Eleven of the 26 monitoring wells located on Sky Harbor Airport property did not contain detectable levels of VOCs in June/July 2006, as shown on Figure 2-10.

2.2.9 Total Non-fuel Volatile Organic Compounds

Total non-fuel VOCs consists of the sum of detected concentrations from a list of analytes prepared by a CH2M HILL chemist (Table 2-2). The analytes listed in Table 2-2 represent compounds not related to releases of petroleum hydrocarbons (e.g., jet fuel). Similar to the previous quarter (March 2006), non-fuel VOCs were detected in the majority of monitoring wells sampled in June/July 2006 but at much lower concentrations than total VOCs. This is consistent with the location of the sampled monitoring wells, which are in an area primarily contaminated with fuel-related compounds. The maximum total non-fuel VOC concentration in June/July 2006 was 167 µg/L in monitoring well ASE-91A, as shown on Figure 2-11. This concentration represented a decrease from the March 2006 maximum total non-fuel VOC concentration of 222 µg/L, also detected in monitoring well ASE-91A. No other monitoring wells sampled during June/July 2006 contained a total non-fuel VOC

concentration exceeding 100 µg/L. Monitoring well ASE-115A, which contained the highest concentrations of total BTEX and total VOCs, only contained a total non-fuel VOC concentration of 6 µg/L (i.e., the majority of the detectable compounds were fuel-related). In addition, 14 of the 26 monitoring wells located on Sky Harbor Airport property did not contain detectable levels of non-fuel VOCs in June/July 2006, as shown on Figure 2-11. Detection limits for total non-fuel VOCs were generally less than 25 µg/L, although in some instances, elevated detection limits for certain parameters were necessary. For example, while the detection limits for most non-fuel VOC parameters for the water quality sample collected from monitoring well ASE-56A were less than 100 µg/L, some detection limits were as high as 250 µg/L (vinyl acetate) and 200 µg/L (acetone).

2.2.10 Total Trichloroethylene

Total TCE consists of the sum of detected concentrations of TCE and its daughter products, cis-1,2-dichloroethene (cis-1,2-DCE) and vinyl chloride. Calculating values of total TCE allows for an evaluation of the distribution of compounds related to releases of TCE, where the parent compound (TCE) may have degraded to its daughter products. In June/July 2006, TCE and related compounds were detected at relatively low concentrations throughout the area associated with the CAP on the Honeywell facility, with some low (<10 µg/L) detections observed in monitoring wells located on Sky Harbor Airport property, as shown on Figure 2-12. The maximum total TCE concentration in June/July 2006 was observed in monitoring well ASE-60A (65 µg/L), located northeast of the historical free-product pool and east of the area associated with the CAP (Figure 2-12). Total TCE concentrations exceeding 25 µg/L were only detected in two monitoring wells: ASE-60A (65 µg/L) and ASE-68A (44.2 µg/L) (Figure 2-12). No total TCE concentration exceeded 10 µg/L on Sky Harbor Airport property (maximum of 5.4 µg/L in monitoring well ASE-90A), and 23 of the 26 monitoring wells located on Sky Harbor Airport property did not contain detectable levels of TCE-related compounds (Figure 2-12). Detection limits for total TCE were generally less than 2 µg/L, although, in some cases, higher detection limits were necessary. For example, the detection limits for compounds related to TCE for the water-quality samples collected from monitoring wells ASE-55A, ASE-56A, and ASE-91A were 20 µg/L for TCE and cis-1,2-DCE and 17µg/L for vinyl chloride.

2.2.11 Total 1,1,1-trichloroethane

Total TCA consists of the sum of detected concentrations of 1,1,1-TCA and its daughter products, 1,1-dichloroethane (1,1-DCA), 1,1-dichloroethene (1,1-DCE), and chloroethane. Similar to total TCE, calculating values of total TCA allows for an evaluation of the distribution of compounds related to releases of 1,1,1-TCA where the parent compound (1,1,1-TCA) may have degraded to its daughter products. Compounds related to 1,1,1-TCA were detected in monitoring wells located in the western portion of the area associated with the CAP in June/July 2006, with a maximum total TCA concentration of 150 µg/L in monitoring well ASE-91A (Figure 2-13). In addition to monitoring well ASE-91A, total TCA concentrations exceeding 50 µg/L were only detected in four other monitoring wells: ASE-46A (54 µg/L), ASE-55A (63 µg/L), ASE-56A (74 µg/L), and ASE-57A (51 µg/L), and 16 of the 26 monitoring wells located on Sky Harbor Airport property did not contain detectable levels of 1,1,1-TCA-related compounds, as shown on Figure 2-13. Similar to total TCE, detection limits for total TCA were generally less than 5 µg/L, although, in some cases,

higher detection limits were necessary. For example, the detection limits for compounds related to 1,1,1-TCA for the water-quality samples collected from monitoring wells ASE-55A, ASE-56A, and ASE-91A were 50 µg/L for 1,1-DCE and chloroethane and 20 µg/L for 1,1,1-TCA and 1,1-DCA.

2.3 Groundwater – Third Quarter 2006

This section presents an evaluation of the groundwater levels and associated groundwater flow directions in September 2006 in the area related to the UST.

Water quality samples were collected from 150 monitoring wells in September 2006 because the third quarter UST water quality sampling round coincides with the sitewide CERCLA semi-annual groundwater sampling event. Sixty-two of these monitoring wells were sampled as part of the UST monitoring program. Analytical results from these monitoring wells are presented in this quarterly status report on plan view maps and discussed below. Complete laboratory analytical and data validation reports are contained in Appendix B.

This section includes plan view maps with posted water quality data for:

- Benzene.
- MTBE.
- Naphthalene.
- Benzo(a)pyrene.
- Total BTEX.
- TRPH.
- Total VOCs.
- Total non-fuel VOCs.
- Total TCE.
- Total TCA.

Concentration contours are presented along with the posted data for the individual compounds (benzene, MTBE, naphthalene, and benzo(a)pyrene). These contours delineate areas exceeding regulatory standards and laboratory detection limits.

2.3.1 Water-level Elevations

Groundwater elevations for all monitoring wells at and near the Honeywell facility were measured on September 6, 2006, except for monitoring well ASE-67A which was measured on September 7, 2006. These elevations and associated groundwater level contours are presented on Figure 2-14 for the eastern portion of the Honeywell facility and Sky Harbor Airport property. Similar to previous time periods, the direction of groundwater flow in this area was to the south-southwest (Figure 2-14). A comparison of water-level elevations collected in June and September 2006 shows that water levels rose in every monitoring well associated with the CAP for the second straight quarter (Table 2-3). The rise in water level elevation between June and September 2006 ranged from 1.01 feet (PL-2102) to 4.02 feet (ASE-99A), with an average rise of approximately 2.26 feet. Hydrographs illustrating water level elevations over time for each of Honeywell's UST monitoring wells are included as Appendix A.

Honeywell is preparing an evaluation of the recent rising water levels in the area surrounding the Honeywell facility and the northern portion of Sky Harbor Airport. The preliminary indications from this evaluation suggest that discharge into the Salt River from sources including the City of Tempe and the City of Mesa has caused the baseline flow in the Salt River channel to increase from about 1 to 2 cubic feet per second to approximately 10 cubic feet per second. This change in baseline flow, coupled with a few substantial precipitation events during the 2006 summer monsoon season, has affected water levels in the area near the Salt River, including the Honeywell facility and Sky Harbor Airport property. Records from the United States Geological Survey indicate that the increase in baseline flow started at roughly about the same time as the Winter 2004/2005 storms, which caused the rise in the water table and the divergence from the regional water level declines. Honeywell's preliminary evaluation also suggests that the discharges by the City of Tempe ceased in early September 2006 and those from the City of Mesa are planned to cease or significantly decrease by early 2007. The reduction or discontinuation of these discharges should allow the localized water table to return to the regional decline seen in other areas of the Salt River Basin. Should the Phoenix area receive above-average precipitation amounts during the upcoming winter, however, water levels in the vicinity of the petroleum hydrocarbon contamination at Honeywell will probably rise again. Honeywell will continue to closely monitor the water table in the area and the events that affect the localized water levels and provide more information on its evaluation in the next quarterly status report.

2.3.2 Benzene

Benzene was detected in groundwater throughout the eastern portion of the Honeywell facility and onto Sky Harbor Airport property in September 2006, generally consistent with the historical areal extent of the free-product pool. The maximum concentration of benzene in September 2006 occurred in monitoring well ASE-115A (5,600 µg/L) (Figure 2-15). This concentration was higher than the previous quarter's maximum of 4,200 µg/L, which also occurred in monitoring well ASE-115A. Consistent with the data from June/July 2006, the highest benzene concentrations in September 2006 occurred in monitoring wells associated with the Area 2 fuel farm (ASE-115A, 5,600 µg/L; ASE-63A, 4,000 µg/L; ASE-116A, 560 µg/L; ASE-38A, 650 µg/L; ASE-39A, 470 µg/L). Concentrations of benzene exceeding the USEPA MCL of 5 µg/L were detected both at the Honeywell facility and beneath the northern portion of Sky Harbor Airport in September 2006, as shown on Figure 2-15.

In general, the September 2006 benzene concentrations were lower than those in June/July 2006, with some increases observed in monitoring wells on both the Honeywell and Sky Harbor Airport properties. Most significant of these increases was the detection of benzene of 5,600 µg/L in monitoring well ASE-115A, compared to a concentration of 4,200 µg/L in this monitoring well in June/July 2006. Benzene was detected in monitoring well ASE-55A at a concentration of 8.7 µg/L during the September 2006 sampling round, and while it wasn't detected in this monitoring well in June/July 2006, the detection limit for that sample was 10 µg/L. Benzene was previously detected in monitoring well ASE-55A in March 2006 at a concentration of 7 µg/L.

Given the south-southwesterly direction of groundwater flow in the area, the extent of benzene concentrations exceeding the MCL is delineated in all directions. The upgradient

(northeast) extent is delineated by monitoring wells ASE-59A, ASE-60A, and ASE-61A; the cross-gradient extent is delineated by monitoring wells PL-2101, ASE-66A, and ASE-54A to the northwest and by monitoring wells ASE-127A and BC-7A to the southeast, as shown on Figure 2-15. The downgradient (south-southwest) extent of benzene exceeding the MCL is delineated by monitoring wells ASE-58A, PL-201A, ASE-62A, ASE-65A, ASE-126A, ASE-97A, ASE-125A, ASE-95A, BC-8B, ASE-124A, ASE-96A, ASE-106A, ASE-101A, ASE-102A, ASE-114A, and ASE-113A (Figure 2-15). Additional monitoring wells downgradient of the Honeywell facility did not contain detectable levels of benzene, as indicated on Figure 2-15.

2.3.3 Methyl Tert-butyl Ether

MTBE was detected in groundwater throughout the eastern portion of the Honeywell facility and onto Sky Harbor Airport property in September 2006. The maximum concentration of MTBE in September 2006 occurred in monitoring well ASE-115A (1,100 µg/L), located in the vicinity of the Area 2 fuel farm, as shown on Figure 2-16. This concentration was identical to the concentration detected in this well in June/July 2006. The concentration of MTBE in monitoring well ASE-89A, located on Sky Harbor Airport property, decreased from the June/July maximum concentration of 1,200 µg/L to a concentration of 1,000 µg/L in September 2006. In September 2006, additional elevated (>200 µg/L) MTBE concentrations of 450 µg/L and 460 µg/L were detected south of the Area 2 fuel farm in monitoring wells ASE-63A and ASE-39A, respectively. Monitoring well ASE-106A, located south of monitoring well ASE-89A on Sky Harbor Airport property, also had an elevated (>200 µg/L) MTBE concentration of 240 µg/L. Concentrations of MTBE exceeding its ADEQ-recommended Tier 1 remedial level of 94 µg/L—the remedial level that should be used when an existing drinking water receptor is not affected or is not potentially affected by MTBE (ADEQ 2002)—were detected both on the Honeywell facility and beneath the northern portion of Sky Harbor Airport, as shown on Figure 2-16.

Overall, similar to previous quarters, the September 2006 sampling results indicated some shifting of the concentrations of MTBE. The area that exceeded the Tier 1 remedial level of 94 µg/L decreased from the previous quarter, driven by the decrease in MTBE concentrations in three monitoring wells (ASE-68A, 78 µg/L; ASE-95A, 70 µg/L; ASE-37A, 80 µg/L). The concentration of MTBE in monitoring well ASE-90A increased from 78 µg/L in June/July 2006 to 140 µg/L in September 2006, thus exceeding the Tier 1 MTBE remedial level. In September 2006, MTBE was detected in three monitoring wells that did not have detectable concentrations of MTBE during the previous sampling round (ASE-56A, 28 µg/L; ASE-91A, 60 µg/L; BC-8B, 8.4 µg/L). As a result of these detections, the contour illustrating the extent of detectable concentrations of MTBE shifted to the west, as shown on Figure 2-16. MTBE was not detected in September 2006 in three monitoring wells that had contained detectable levels of MTBE in June/July 2006 (ASE-57A, ASE-64A, and ASE-124A). Consequently, the extent of the MTBE plume was reduced in the vicinity of these wells, as shown on Figure 2-16.

Given the south-southwesterly direction of groundwater flow in the area, the extent of MTBE concentrations exceeding its Tier 1 remedial level is delineated in all directions. The upgradient (northeast) extent is delineated by monitoring wells ASE-68A, ASE-51A, ASE-52A, ASE-53A, ASE-60A, ASE-111A, and ASE-61A; the cross-gradient extent is delineated by monitoring wells ASE-66A, PL-2101, ASE-20A, ASE-56A, and ASE-57A to the

northwest and by monitoring wells ASE-127A, BC-7A, and ASE-64A to the southeast, as shown on Figure 2-16. The downgradient (south-southwest) extent of MTBE exceeding its Tier 1 remedial level is delineated by monitoring wells ASE-46A, ASE-62A, ASE-55A, PL-105A, ASE-91A, BC-8B, ASE-95A, ASE-124A, ASE-96A, ASE-101A, ASE-102A, ASE-107A, and ASE-113A (Figure 2-16). Additional monitoring wells downgradient of the Honeywell facility did not contain detectable levels of MTBE, as indicated on Figure 2-16.

Based on the September 2006 data, the extent of the MTBE plume on Sky Harbor Airport property was delineated to ADEQ's investigative level of 20 µg/L by monitoring wells ASE-97A, BC-8B, ASE-125A, ASE-103A, ASE-100A, and ASE-124A to the west and by monitoring wells ASE-101A, ASE-128A, ASE-102A, ASE-110A, ASE-107A, ASE-114A, ASE-109A, ASE-123A, ASE-122A, and ASE-113A to the south (Figure 2-16).

2.3.4 Naphthalene

Naphthalene was detected in groundwater throughout the eastern portion of the Honeywell facility and onto Sky Harbor Airport property, generally consistent with the extent of the free-product pool, although the extent of naphthalene was not as far to the south. The maximum concentration of naphthalene in September 2006 occurred in monitoring well ASE-57A (340 µg/L), located in the parking lot north of Air Lane, as shown on Figure 2-17. Similar to June/July 2006, this monitoring well represented the only location where the naphthalene concentrations exceeded the health-based guidance level of 280 µg/L in September 2006. Other detectable levels of naphthalene in September 2006 ranged from 2.1 µg/L (ASE-92A) to 250 µg/L (ASE-56A and ASE-89A). As indicated on Figure 2-17, the area where the naphthalene concentration exceeded the health-based guidance level is limited and defined by the Honeywell UST monitoring well network.

Due to a laboratory error, naphthalene results from monitoring well ASE-111A were not available for third quarter 2006. According to the laboratory report, some of the analyses from this sample exceeded the holding time, thus making the results invalid. In addition to naphthalene, the laboratory error affected the results from monitoring well ASE-111A for total BTEX, total VOCs, total non-fuel VOCs, total TCE, and total TCA. As such, the values for these parameters for monitoring well ASE-111A have been removed and noted on the appropriate figures.

2.3.5 Benzo(a)pyrene

Consistent with previous quarters, benzo(a)pyrene was not detected in any monitoring well sampled in September 2006, as shown on Figure 2-18.

2.3.6 Total Benzene, Toluene, Ethylbenzene, and Xylenes

Total BTEX consists of the sum of concentrations of benzene, toluene, ethylbenzene, and total xylenes (*meta*, *para*, and *ortho* isomers). BTEX components were detected throughout the area associated with the CAP in September 2006, with a maximum total BTEX concentration of 6,480 µg/L in monitoring well ASE-115A, as shown on Figure 2-19. Total BTEX concentrations exceeding 500 µg/L were detected in a north-south direction from the Area 2 fuel farm (from monitoring well ASE-115A to the north, to monitoring well ASE-64A to the south), and to the west of the Area 2 fuel farm in monitoring wells ASE-56A (667.3 µg/L) and ASE-57A (691 µg/L) (Figure 2-19). This is generally the same concentration

pattern as the previous quarter (June/July 2006), although the concentrations detected in September 2006 were generally lower. Twenty-one of the 26 monitoring wells located on Sky Harbor Airport property did not contain detectable levels of BTEX components in September 2006, as shown on Figure 2-19.

2.3.7 Total Recoverable Petroleum Hydrocarbons

TRPH consists of the sum of compounds with the carbon range C_{13} to C_{32}. TRPH compounds were detected throughout the area associated with the CAP in September 2006, with a maximum TRPH concentration of 15,000 µg/L in monitoring well ASE-57A, as shown on Figure 2-20. This was a significant decrease from the maximum TRPH concentration of 77,000 µg/L detected in monitoring well ASE-55A in June/July 2006. The TRPH concentration in monitoring well ASE-55A decreased from 77,000 µg/L in June/July 2006 to 3,500 µg/L in September 2006, as shown on Figure 2-20. TRPH concentrations equaling or exceeding 1,000 µg/L were detected in eight monitoring wells in September 2006, with seven of the eight wells located on the Honeywell facility. Unlike the BTEX components, the highest TRPH concentrations were not found in the area associated with the Area 2 fuel farm. Rather, the maximum concentrations were detected in monitoring wells located downgradient of a known historical fuel release from the original Area 2 fuel farm (southwest corner of Building 230), as shown on Figure 2-20.

Six monitoring wells which did not contain detectable levels of TRPH compounds during the June/July 2006 sampling event had detections of TRPH during the September 2006 round (ASE-53A, 54 µg/L; PL-201A, 62 µg/L; ASE-65A, 68 µg/L; ASE-97A, 73µg/L; BC-8B, 71 µg/L; and ASE-123A, 52 µg/L), as shown on Figure 2-20. Conversely, TRPH compounds were not detected in September 2006 in nine monitoring wells (PL-2101, ASE-127A, ASE-108A, ASE-106A, ASE-102A, ASE-98A, ASE-110A, ASE-113A, and ASE-114A) that contained detectable levels of TRPH compounds in June/July 2006. The lack of detection of TRPH compounds in monitoring wells ASE-98A and ASE-110A indicates that the extent of TRPH compounds is delineated by Honeywell's southernmost monitoring wells. Sixteen of the 26 monitoring wells located on Sky Harbor Airport property did not contain detectable levels of TRPH in September 2006.

2.3.8 Total Volatile Organic Compounds

Total VOCs consists of the sum of detected concentrations from the USEPA Method 8260 analyte list. VOCs were detected in the majority of monitoring wells sampled in September 2006, with a maximum total VOC concentration of 8,232.2 µg/L in monitoring well ASE-115A, as shown on Figure 2-21. Total VOC concentrations exceeding 750 µg/L were detected in roughly the same pattern and primarily in the same monitoring wells as those containing concentrations of total BTEX greater than 500 µg/L, although the extent was slightly further to the south, as shown on Figure 2-19. Total VOC concentrations observed in September 2006 were lower for just over half the monitoring wells as compared to the June/July 2006 results. However, the general extent of total VOCs for September 2006 was similar to that in June/July 2006. Eleven of the 26 monitoring wells located on Sky Harbor Airport property did not contain detectable levels of VOCs in September 2006, as shown on Figure 2-21.

2.3.9 Total Non-fuel Volatile Organic Compounds

Total non-fuel VOCs consists of the sum of detected concentrations from a list of analytes prepared by a CH2M HILL chemist, as shown in Table 2-2. The analytes listed in Table 2-2 represent compounds not related to releases of petroleum hydrocarbons (e.g., jet fuel). Similar to the previous quarter (June/July 2006), non-fuel VOCs were detected in the majority of monitoring wells sampled in September 2006 but at much lower concentrations than total VOCs. This is consistent with the location of the sampled monitoring wells, which are in an area primarily contaminated with fuel-related compounds. Similar to June/July 2006, the maximum total non-fuel VOC concentration in September 2006 was 138 µg/L in monitoring well ASE-91A, as shown on Figure 2-22. This concentration represented a decrease from the June/July 2006 maximum total non-fuel VOC concentration of 167 µg/L, also detected in monitoring well ASE-91A. No other monitoring wells sampled during September 2006 contained total non-fuel VOC concentrations exceeding 100 µg/L. Monitoring well ASE-115A, which contained the highest concentrations of total BTEX and total VOCs, only contained a total non-fuel VOC concentration of 2 µg/L (i.e., almost all of the detectable compounds were fuel-related). In addition, 16 of the 26 monitoring wells located on Sky Harbor Airport property did not contain detectable levels of non-fuel VOCs in September 2006, as shown on Figure 2-22. Detection limits for total non-fuel VOCs were generally less than 25 µg/L, although, in some instances, elevated detection limits for certain parameters were necessary. For example, while the detection limits for most non-fuel VOC parameters for the water-quality sample collected from monitoring well ASE-63A were less than or equal to 100 µg/L, some detection limits were as high as 1,200 µg/L (vinyl acetate), 1,000 µg/L (acetone), 500 µg/L (2-butanone, 2-hexanone, and 4-methyl-2-pentanone), and 250 µg/L (1,1-dichloroethene, 1,2-dibromo-3-chloropropane, bromoform, bromomethane, carbon disulfide, carbon tetrachloride, chloroethane, chloromethane, dichlorodifluoromethane, hexachlorobutadiene, methylene chloride, and trichlorofluoromethane). Detection limits were also slightly higher for the water-quality samples collected from monitoring wells ASE-55A and ASE-57A. The detection limits for these samples were 250 µg/L for vinyl acetate and 200 µg/L for acetone.

2.3.10 Total Trichloroethylene

Total TCE consists of the sum of detected concentrations of TCE and its daughter products, cis-1,2-DCE and vinyl chloride. Calculating values of total TCE allows for an evaluation of the distribution of compounds related to releases of TCE, where the parent compound (TCE) may have degraded to its daughter products. In September 2006, TCE and related compounds were detected at relatively low concentrations throughout the area associated with the CAP on the Honeywell facility, with some low (<5 µg/L) detections observed in monitoring wells located on Sky Harbor Airport property, as shown on Figure 2-23. The maximum total TCE concentration in September 2006 was observed in monitoring well ASE-68A (67.6 µg/L), located in the northwestern portion of the area associated with the CAP, as shown on Figure 2-23. This represented a shift in the location of the maximum total TCE concentration to the west, as in previous quarters, the maximum total TCE has been located upgradient (northeast) of the Honeywell facility in monitoring well ASE-60A. Total TCE concentrations exceeding 25 µg/L were only detected in two monitoring wells in September 2006: ASE-60A (40 µg/L) and ASE-68A (67.6 µg/L), as shown on Figure 2-23. No total TCE concentration exceeded 10 µg/L on Sky Harbor Airport property (maximum of 4.9

µg/L in monitoring well ASE-90A), and 22 of the 26 monitoring wells located on Sky Harbor Airport property did not contain detectable levels of TCE-related compounds, as shown on Figure 2-23. Detection limits for total TCE were generally less than 2 µg/L, although, in some cases, higher detection limits were necessary. For example, the detection limits for compounds related to TCE for the water-quality sample collected from monitoring well ASE-63A were 100 µg/L for TCE and cis-1,2-DCE and 85 µg/L for vinyl chloride. Detection limits were also slightly higher for the water-quality samples collected from monitoring wells ASE-55A and ASE-57A. The detection limits for these samples were 20 µg/L for TCE and cis-1,2-DCE, and 17µg/L for vinyl chloride.

2.3.11 Total 1,1,1-trichloroethane

Total TCA consists of the sum of detected concentrations of 1,1,1-TCA and its daughter products, 1,1-DCA, 1,1-DCE, and chloroethane. Similar to total TCE, calculating values of total TCA allows for an evaluation of the distribution of compounds related to releases of 1,1,1-TCA where the parent compound (1,1,1-TCA) may have degraded to its daughter products. Similar to previous quarters, compounds related to 1,1,1-TCA were detected in monitoring wells located in the western portion of the area associated with the CAP in September 2006, with a maximum total TCA concentration of 124 µg/L in monitoring well ASE-91A, as shown on Figure 2-24. In addition to monitoring well ASE-91A, total TCA concentrations exceeding 50 µg/L were only detected in three other monitoring wells: PL-105A (61 µg/L), ASE-55A (52 µg/L), and ASE-56A (73.4 µg/L), and 17 of the 26 monitoring wells located on Sky Harbor Airport property did not contain detectable levels of 1,1,1-TCA-related compounds (Figure 2-24). Similar to total TCE, detection limits for total TCA were generally less than 5 µg/L, although, in some cases, higher detection limits were necessary. For example, the detection limits for compounds related to 1,1,1-TCA for the water-quality sample collected from monitoring well ASE-63A were 250 µg/L for 1,1-DCE and chloroethane and 100 µg/L for 1,1,1-TCA and 1,1-DCA. Detection limits were also slightly higher for the water-quality samples collected from monitoring wells ASE-55A and ASE-57A. The detection limits for these samples were 50 µg/L for 1,1-DCE and chloroethane and 20 µg/L for 1,1,1-TCA and 1,1-DCA.

SECTION 3.0

Site Remediation Activities

This section summarizes the scope and results of site remediation activities conducted during the third quarter of 2006.

3.1 Free-product Recovery

During third quarter 2006, Honeywell continued to manually recover free product biweekly from monitoring wells with free-product thicknesses greater than 0.1 foot. A portable free-product pump, the *Spill Buddy Pro*™, from Clean Earth Technology, was used to manually recover the free product.

Free product was also recovered from monitoring well ASE-67A using an automated free-product skimming pump, the *Magnum Spill Buster*™, from Clean Earth Technology, which was installed on December 24, 2005. The pump was installed in monitoring well ASE-67A in conformance with CAP free-product monitoring and recovery requirements.

Approximately 33 gallons of free product, including 29.4 gallons from monitoring well ASE-67A, were recovered during third quarter 2006. This compares to the approximate 62 gallons recovered during second quarter 2006 and approximate 22 gallons recovered during first quarter 2006. Approximately 7,165 gallons have been recovered using skimming technologies since free-product recovery efforts began on June 1, 1999. Table 3-1 summarizes the amount of free product recovered at each monitoring well that has historically had measurable free product.

3.2 Bioenhanced Soil Vapor Extraction

3.2.1 Bioenhanced Soil Vapor Extraction Air Permitting

On July 27, 2006, Maricopa County selected Kleinfelder as their consultant to conduct an expedited review of the BSVE air permit application. A kickoff meeting with Maricopa County and Kleinfelder was conducted on August 15, 2006. Since that meeting, Honeywell has participated in weekly conference calls with the permit review team and has provided supplemental information as requested. Representatives from Maricopa County, Kleinfelder, Honeywell, and CH2M HILL also attended a Technical Advisory Group meeting on September 7, 2006 where members of the public asked questions related to the status of the air permit. On September 28, 2006, Maricopa County requested that Honeywell submit a revised permit application by October 13, 2006. Subsequently, Honeywell began preparation of the revised permit application at the end of the third quarter 2006. Maricopa County issued a determination of the application's completeness on October 26, 2006. Based on available information received from Maricopa County and Kleinfelder, the approximate timeline for issuing a final permit is roughly late second quarter 2007. This includes time for:

- Review of the permit application by Kleinfelder.

- Issuance of a draft permit to Honeywell for comment.
- Finalization of the draft permit.
- Public notice.
- Public hearing (if requested) and response to comments.
- Revision of the draft permit.
- USEPA review of the permit.

Upon issuance of the final air permit, Honeywell will commence construction of the BSVE system at the Facility. Honeywell will continue to work with Maricopa County and Kleinfelder and provide the status of the air permit to ADEQ in future quarterly status reports.

3.2.2 Air Injection Pilot Test

As presented in the *Second Quarter Status Report for 2006* (CH2M HILL 2006b), Honeywell completed the fourth and final phase of the air injection pilot test on May 12, 2006, achieving the objectives set forth in the *Final Air Injection Pilot Test Work Plan* (Honeywell 2005) for monitoring well ASE-41A. Honeywell continues to monitor 13 Sky Harbor Airport subsurface utility vaults monthly for O_2, CO_2, methane, and %LEL. Monthly monitoring during third quarter 2006 occurred on July 12, August 8, and September 14, 2006. Results from these three monitoring events indicated that methane concentrations and %LEL at Sky Harbor Airport subsurface utility vaults continue to be non-detect. The next anticipated field measurement sampling event for O_2, CO_2, methane, and %LEL at Sky Harbor Airport subsurface utility vaults is anticipated to be in January 2007. Table 3-2 presents the third quarter 2006 subsurface utility vault air field parameter measurements.

Between July 4 and July 12, 2006, on August 8, 2006, and between September 14 and September 29, 2006, Honeywell conducted more helium tracer tests to determine well dilution effects from ambient air at selected monitoring wells (helium tracer tests were begun in second quarter 2006 to determine well dilution effects). The results of the third quarter 2006 well dilution testing are presented in Table 3-3. The analytical laboratory report is contained in Appendix B.

A complete presentation and discussion of air injection pilot test results, including well dilution testing conducted during third quarter 2006, was included in the Air Injection Pilot Test Report, submitted to ADEQ on October 20, 2006.

3.2.3 Vapor Monitoring Program

At the request of the City of Phoenix (COP), during third quarter 2006, Honeywell prepared a Field Sampling Plan (FSP) to collect air samples from selected subsurface vaults and storm sewer manholes on Sky Harbor Airport property (Honeywell 2006b). The FSP is being submitted concurrently with this quarterly status report under separate cover. The air samples will be analyzed for VOCs using USEPA Method TO-15. To minimize the impact of saturated soils on the VOC concentrations in the air within the subsurface structures, Honeywell and COP have agreed there shall be a minimum 30-day period between the time stormwater is removed from the vaults and when the samples are collected. Since the FSP was prepared, there has yet to be a 30-day period between the time stormwater was

removed from the vaults and the next rain event; therefore, the FSP was not implemented during the third quarter 2006.

Procedures from the FSP will be incorporated into the draft Interim Vapor Monitoring Plan that Honeywell is developing at the request of COP. This plan will identify the monitoring activities at the Honeywell facility and Sky Harbor Airport property for the timeframe prior to the construction and startup of the BSVE system.

SECTION 4.0

Summary of Planned Work

The following activities are planned for the period between October 2006 and December 2006:

- Conduct fourth quarterly groundwater sampling event for 2006 (tentatively scheduled for December 11 to December 19, 2006), monthly water-level measurements, and biweekly and monthly free-product monitoring and recovery in accordance with the *LUST Field Sampling Plan – Groundwater Sampling, Free Product Monitoring and Recovery Plan* (CH2M HILL 2005a).
- Continue to work with Maricopa County on the progress of the BSVE air permit application review and submit any requested supplemental material in a timely manner.
- Submit revised air permit application to Maricopa County.
- Submit Air Injection Pilot Test report to ADEQ.
- Complete helium gas tracer tests to determine well dilution effects from ambient air at monitoring wells ASE-20A, ASE-111A, BC-18, P-14-U, and P-21-L.
- Conduct field parameter monitoring for select Sky Harbor Airport subsurface utility vaults in January 2007. The results will be used for the human health risk assessment.
- Prepare the draft Interim Vapor Monitoring Plan for vapor monitoring to be implemented prior to the construction and startup of the BSVE system. This plan will propose the installation of additional soil vapor monitoring wells, additional subslab monitoring points, and subsurface utility vault air monitoring. This plan will be discussed with the COP in early November 2006 and will be submitted to ADEQ during first quarter 2007, instead of fourth quarter 2006, as originally stated in the *Second Quarter Status Report for 2006* (CH2M HILL 2006b). Please note that this Interim Vapor Monitoring Plan was previously called a "work plan to propose installation of soil vapor monitoring wells."

SECTION 5.0

Summary of Problems and Delays

Sky Harbor Airport subsurface utility vault air sampling for VOCs using USEPA Method TO-15 was postponed due to weather delays. Honeywell continues to monitor rain events so that vault air sampling can occur as soon as the weather permits.

SECTION 6.0

Status of Deliverables

The following is a list of deliverables submitted through third quarter 2006 since the *Site Characterization Report* dated August 23, 2002:

- On September 15, 2006, Honeywell submitted a letter to ADEQ proposing to modify the scheduled submittal dates of quarterly status reports such that future reports are submitted to ADEQ no later than 60 days following the end of each calendar quarter.
- On August 3, 2006, Honeywell submitted to ADEQ a letter "RE: *Modification to Final Air Injection Pilot Test Work Plan*," dated October 4, 2005, that explained the method for conducting a short-term pilot test and the plan for implementation on Sky Harbor Airport Property.
- On July 20, 2006, Honeywell submitted to ADEQ a letter that explained the status of the pilot test, Honeywell's agreement with the COP to evaluate the BSVE design, assuming 8 percent oxygen utilization rate, and the status of the air permit applications.
- On July 14, 2006, CH2M HILL, on behalf of Honeywell, submitted to ADEQ the *Second Quarter Status Report for 2006, Honeywell 34th Street Facility, Facility ID No. 0-002227, LUST File Nos. 0393.02-.10, .15.*
- On April 14, 2006, CH2M HILL, on behalf of Honeywell, submitted to ADEQ the *First Quarter Status Report for 2006, Honeywell 34th Street Facility, Facility ID No. 0-002227, LUST File Nos. 0393.02-.10, .15.*
- On March 2, 2006, Honeywell submitted to ADEQ the *Proposed Modification to Honeywell's Groundwater Sampling, Free Product Monitoring and Recovery Plan – Total Recoverable Petroleum Hydrocarbons Analytical Method, LUST File #0393.02-.10, .15, Facility ID #0-002227.*
- On January 16, 2006, CH2M HILL, on behalf of Honeywell, submitted to ADEQ the *Quarterly Status Report, Quarter 1 (October 17, 2005 to January 15, 2006), Honeywell 34th Street Facility, Facility ID No. 0-002227, LUST File No. 0393.02-.10, .15.*
- On January 13, 2006, CH2M HILL, on behalf of Honeywell, submitted to ADEQ the *Soil Vapor Field Sampling Report, Honeywell 34th Street Facility, 111 S. 34th Street, Phoenix, Arizona.*
- On December 9, 2005, CH2M HILL, on behalf of Honeywell, submitted to ADEQ the *LUST Field Sampling Plan – Groundwater Sampling, Free Product Monitoring and Recovery Plan*.
- On December 7, 2005, CH2M HILL, on behalf of Honeywell, submitted to Maricopa County (1) the Revised Air Permit Application for BSVE and (2) the Air Permitting Evaluation for Air Injection Pilot Study. On December 19, 2005, copies of the Revised Air Permit Application for BSVE were sent to ADEQ, COP Aviation Department, and USEPA.

- On November 17, 2005, CH2M HILL, on behalf of Honeywell, submitted to ADEQ's LUST Enforcement Unit, a letter that explained the reasons for the differences in the timeline for "Startup and Initial Testing" presented in the revised schedule (Revised Figure 32, attachment to the November 2, 2005 letter) and the original schedule in the CAP.
- On November 2, 2005, CH2M HILL, on behalf of Honeywell, submitted to ADEQ's LUST Enforcement Unit, a letter that provided a status update on several aspects of the CAP implementation and on the conditions set forth in ADEQ's October 7, 2005 CAP approval letter. Attachments to this letter include (1) revised Figure 32—Remedial Alternative 3 Implementation Schedule, (2) free-product thickness map, October 2005, (3) list of site characterization activities since submittal of the *Site Characterization Report*, (4) updated site characterization figures and tables, (5) boring logs, and (6) a CD containing analytical and monitoring well measurement data.
- On October 20, 2005, CH2M HILL, on behalf of Honeywell, submitted to ADEQ the *Work Plan for Additional Characterization of LUST File #0393.15 – JP-4 Fuel Pipeline Release at the Honeywell 34th Street Facility*.
- On October 4, 2005, Honeywell submitted to ADEQ the *Final Air Injection Pilot Test Work Plan, Honeywell 34th Street Facility and Phoenix Sky Harbor International Airport North Airfield, Phoenix, Arizona*.
- On September 19, 2005, CH2M HILL, on behalf of Honeywell, submitted to ADEQ the *Quality Assurance Project Plan, Honeywell 34th Street Facility.*
- On September 7, 2005, CH2M HILL, on behalf of Honeywell, submitted to ADEQ the *Work Plan for Phase III Monitoring Well Installation on Honeywell Leasehold and Phoenix Sky Harbor International Airport, Honeywell 34th Street Facility*.
- On August 22, 2005, CH2M HILL, on behalf of Honeywell, submitted to ADEQ the *Work Plan for Installation of Multi Level Soil Vapor Monitoring Wells and Shallow/Sub-slab Soil Vapor Monitoring Points, Honeywell 34th Street Facility*.
- On July 11, 2005, CH2M HILL, on behalf of Honeywell, submitted to ADEQ the *Soil Vapor Baseline Sampling and Analysis Plan, Honeywell 34th Street Facility.*
- On July 1, 2005, Honeywell submitted to ADEQ's Tank Programs Division the *Free Product Report – LUST File #0393.15 – JP-4 Fuel Line from UST #203.*
- On June 13, 2005, Honeywell submitted to ADEQ's Tank Programs Division the *Initial Site Characterization Report – LUST File #0393.15 – JP-4 Fuel Line from UST #203*.
- On March 29, 2005, Honeywell submitted to ADEQ's Tank Programs Division the *14-day Report – LUST File #0393.15 – JP-4 Fuel Line from UST #203.*
- On November 15, 2004, CH2M HILL, on behalf of Honeywell, submitted to ADEQ's UST Corrective Action Section responses to ADEQ's September 30, 2004 comments on Honeywell's July 30, 2004 *Revised Corrective Action Plan.* The corresponding replacement pages of the revised text, tables, and figures of the Revised CAP were also submitted.

- On July 30, 2004, CH2M HILL, on behalf of Honeywell, submitted the *Revised Corrective Action Plan* to ADEQ's UST Corrective Action Section. The Revised CAP supersedes and replaces the original July 18, 2003, CAP.
- On May 27, 2004, Honeywell submitted a three-ring binder to ADEQ's UST Corrective Action Section titled "Supporting Material, UST Informal Settlement Conference, May 28, 2004."
- On May 7, 2003, CH2M HILL, on behalf of Honeywell, submitted to ADEQ a technical memorandum titled "Summary of Results from the Bioventing/SVE Pilot Study February 24 through March 1, 2003."
- On May 1, 2003, Honeywell submitted to ADEQ's UST Corrective Action Section the *Free-product Report, Honeywell International Inc., 34th Street Facility, Phoenix, Arizona, Facility ID# 0-002227, LUST File Nos. 0393.02 -.10*.
- On December 18, 2002, Honeywell submitted to ADEQ's UST Corrective Action Section *Supplemental Site Characterization Information for the Honeywell International Inc., 34th Street Facility, Phoenix, Arizona, Facility ID# 0-002227, LUST File Nos. 0393.02 -.10*.
- On August 23, 2002, CH2M HILL, on behalf of Honeywell, submitted the *Site Characterization Report* to ADEQ's UST Corrective Action Section.

The following are deliverables planned for submittal:

- Interim Vapor Monitoring Plan for vapor monitoring to be implemented upon approval and until the startup of the BSVE system. This plan will propose the installation of additional soil vapor monitoring wells, additional sub-slab monitoring points, and additional subsurface utility vault air monitoring. This plan will be discussed with the COP in early November 2006 and will be submitted to ADEQ during first quarter 2007, instead of fourth quarter 2006, as originally stated in the *Second Quarter Status Report for 2006* (CH2M HILL 2006b). Please note that this Interim Vapor Monitoring Plan was previously called a "work plan to propose installation of soil vapor monitoring wells."
- *Fourth Quarter Status Report for 2006, Honeywell 34th Street Facility, Facility ID No. 0-002227, LUST File Nos. 0393.02-.10, .15.* This report is currently scheduled for submittal to ADEQ on March 1, 2007.

Notes:

This table includes all wells that have historically had measurable free product. Monitoring wells with a free-product thickness less than 0.1 foot are measured monthly. Monitoring wells with a free-product thickness greater than 0.1 foot are measured biweekly.

NM — Free product thickness not measured.

*Measurement collected on September 1, 2006.

**Measurement collected on September 7, 2006.

TABLE 2-2
Non-fuel Volatile Organic Compound List
Third Quarter Status Report, Honeywell 34th Street Facility, Phoenix, Arizona

Soil Vapor	Groundwater	Soil
1,1,1-Trichloroethane	1,1,1,2-Tetrachloroethane	1,1,1,2-Tetrachloroethane
1,1,2,2-Tetrachloroethane	1,1,1-Trichloroethane	1,1,1-Trichloroethane
1,1,2-Trichloroethane	1,1,2,2-Tetrachloroethane	1,1,2,2-Tetrachloroethane
1,1,2-Trichlorotrifluoroethane	1,1,2-Trichloroethane	1,1,2-Trichloroethane
1,1-Dichloroethane	1,1,2-Trichlorotrifluoroethane	1,1,2-Trichlorotrifluoroethane
1,1-Dichloroethene	1,1-Dichloroethane	1,1-Dichloroethane
1,2-Dichlorobenzene	1,1-Dichloroethene	1,1-Dichloroethene
1,2-Dichloropropane	1,1-Dichloropropene	1,1-Dichloropropene
1,2-Dichlorotetrafluoroethane	1,2,3-Trichloropropane	1,2,3-Trichloropropane
1,3-Butadiene	1,2-Dibromo-3-Chloropropane	1,2-Dibromo-3-Chloropropane
1,3-Dichlorobenzene	1,2-Dichlorobenzene	1,2-Dichlorobenzene
1,4-Dichlorobenzene	1,2-Dichloropropane	1,2-Dichloropropane
2-Butanone	1,3-Dichlorobenzene	1,3-Dichlorobenzene
2-Hexanone	1,3-Dichloropropane	1,3-Dichloropropane
4-Methyl-2-Pentanone	1,4-Dichlorobenzene	1,4-Dichlorobenzene
Acetone	2,2-Dichloropropane	2,2-Dichloropropane
Allyl Chloride	2-Butanone	2-Butanone
Bromodichloromethane	2-Hexanone	2-Chloroethyl Vinyl Ether
Bromoethene	4-Methyl-2-Pentanone	2-Hexanone
Bromoform	Acetone	4-Methyl-2-Pentanone
Bromomethane	Bromochloromethane	Acetone
Carbon Disulfide	Bromodichloromethane	Bromochloromethane
Carbon Tetrachloride	Bromoform	Bromodichloromethane
Chlorobenzene	Bromomethane	Bromoform
Chlorodibromomethane	Carbon Disulfide	Bromomethane
Chloroethane	Carbon Tetrachloride	Carbon Disulfide
Chloroform	Chlorobenzene	Carbon Tetrachloride
Chloromethane	Chlorodibromomethane	Chlorobenzene
cis-1,2-Dichloroethene	Chloroethane	Chlorodibromomethane
cis-1,3-Dichloropropene	Chloroform	Chloroethane
Cyclohexane	Chloromethane	Chloroform
Dichlorodifluoromethane	cis-1,2-Dichloroethene	Chloromethane
Ethyl Acetate	cis-1,3-Dichloropropene	cis-1,2-Dichloroethene
Hexachlorobutadiene	Dibromomethane	cis-1,3-Dichloropropene

TABLE 2-2
Non-fuel Volatile Organic Compound List
Third Quarter Status Report, Honeywell 34th Street Facility, Phoenix, Arizona

Soil Vapor	Groundwater	Soil
Isopropanol	Dichlorodifluoromethane	Dibromomethane
Methylene Chloride	Hexachlorobutadiene	Dichlorodifluoromethane
Propylene	Iodomethane	Hexachlorobutadiene
Tetrachloroethene	Methylene Chloride	Iodomethane
Tetrahydrofuran	Styrene	Methylene Chloride
trans-1,2-Dichloroethene	Tetrachloroethene	Styrene
trans-1,3-Dichloropropene	trans-1,2-Dichloroethene	Tetrachloroethene
Trichloroethene	trans-1,3-Dichloropropene	trans-1,2-Dichloroethene
Trichlorofluoromethane	Trichloroethene	trans-1,3-Dichloropropene
Vinyl Acetate	Trichlorofluoromethane	Trichloroethene
Vinyl Chloride	Vinyl Acetate	Trichlorofluoromethane
	Vinyl Chloride	Vinyl Acetate
		Vinyl Chloride

PL-2101	1050.52	1051.67	1.15
PL-2102	1050.57	1051.58	1.01

Notes:

Difference column calculated by subtracting June 2006 water level elevation from September 2006 water level elevation. Positive result indicates higher water level elevation in September signifying a rising water table over the reporting period.

ft amsl-Feet above mean sea level.

NM-Water level elevation not measured.

NA-Not applicable; difference cannot be calculated.

Appendix B
Data Validation and Laboratory Analytical Reports

Honeywell Sky Harbor
May – October 2006 UST Monitoring
Data Quality Evaluation Report

Introduction

The objective of this Data Quality Evaluation (DQE) report is to assess the data quality of analytical results for water samples collected for the UST monitoring period at the Honeywell Sky Harbor site initiated in May 2006. Samples were collected and analyzed in an effort to continue providing a framework for long-term monitoring of the site. The data may also be used to support future activities such as feasibility studies, risk assessments, fate and transport modeling and remedial actions. Individual method requirements, guidelines from the USEPA Contract Laboratory National Functional Guidelines (NFG) for Organic Data Review, October 1999, the USEPA Contract Laboratory NFG for Inorganic Data Review, October 2004, and the Honeywell International Inc., Sky Harbor 34th Street Facility, Quality Assurance Project Plan (QAPP), July 2005, were used as the basis for this assessment.

This report is intended as a general data quality assessment designed to summarize data issues.

Analytical Data

This DQE report covers 175 normal environmental samples, 4 equipment blanks (EB), 24 trip blanks (TB), and 18 field duplicate (FD) samples. The list of samples and collection dates are included in Attachment A at the end of this report. Samples were collected between May 25, 2006 and October 25, 2006. These sample results were reported as 24 sample delivery groups (SDG) listed in Table 1. The analyses were performed by TestAmerica Analytical Testing Corporation located in Phoenix, Arizona (TAMP).

Table 1 – SDGs by Laboratory

SDG	Laboratory
PPF0816	TAMP
PPF0847	TAMP
PPF0892	TAMP
PPG0034	TAMP

PPI0752	TAMP
PPI0753	TAMP
PPI0785	TAMP

Six methods were used to analyze the environmental samples. Samples were collected and delivered by courier or shipped by overnight carrier to the laboratory for analysis. Selected samples were analyzed for one or more of the following analytes/methods:

Table 2 – Analytical Parameters		
Parameter	**Method**	**Laboratory**
Volatile Organic Compounds (VOC)	SW8260	TAMP
Polynuclear Aromatic Hydrocarbons (PAH)	SW8310	TAMP
Total Petroleum Hydrocarbons (TPH) (diesel and motor oil)	SW8015	TAMP
Total Petroleum Hydrocarbons (TPH) (diesel and motor oil)	CALUFT	TAMP
Purgeable Organic Compounds	E624	TAMP
Chromium and nickel	E200.7	TAMP

Data validation was performed in accordance with the USEPA Contract Laboratory NFG for Inorganic Data Review (2004) and Contract Laboratory NFG for Organic Data Review (1999), substituting the calibration and quality control requirements specified in the Sky Harbor QAPP for those specified in the NFG.

The assessment of data includes a review of: (1) the chain-of-custody (CoC) documentation; (2) holding-time compliance; (3) the required field and laboratory quality control (QC) samples; (4) flagging for method blanks; (5) laboratory control sample/laboratory control sample duplicates (LCS/LCSD); (6) surrogate spike recoveries for organic analyses; and, (7) matrix spike/matrix spike duplicate samples (MS/MSD).

Field samples were also reviewed to ascertain field compliance and data quality issues. This included a review of FDs, EBs and TBs.

Data flags are assigned according to the Sky Harbor QAPP. These flags, as well as the reason for each flag, are entered into the electronic database. Multiple flags are routinely applied to specific sample method/matrix/analyte combinations, but there will be only one final flag. A final flag is applied to the data and is the most conservative of the applied validation flags. The final flag also includes matrix and blank sample impacts.

The data flags are defined below:

- J = Analyte was present but reported value may not be accurate or precise.
- R = The result has been rejected.
- U = This analyte was analyzed for but not detected at the specified detection limit.
- UJ = The analyte was not detected above the detection limit objective. However, the reported detection limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample

Findings

The overall summaries of the data validation findings are contained in the following sections below and summarized in Table 6.

Holding Times

All holding-time criteria were met with two exceptions.

Due to a laboratory error, the analytical holding time was exceeded by 20 days for the SW8260 analyses of samples ASE-111A-6C2 and PZ-1B-6C2. All non-detected results in the samples were flagged “R” and rejected for project use. All detected results in the samples were qualified as estimated and flagged “J”.

Sample Quantitation

The Sky Harbor QAPP RL objectives were met for all undiluted analyses with the exception of the samples listed in Table 3. The samples listed in Table 3 were not detected for the listed analytes, the QAPP RL objectives were not met with the MDL or RL.

Table 3 - RL Objective Exceedances

The RLs for naphthalene and acenaphthene are below EPA Region 9 Preliminary Remediation Goals (PRGs), thus there is no effect in data usability.

Several samples required dilution due to high analyte concentrations. The RLs for non-detected analytes in the diluted samples were raised accordingly. Table 4 lists the samples analyzed at a dilution.

Table 4 – Samples Analyzed Diluted

Calibration

Calibration information was not supplied in the Level II validation reports and could not be directly verified to have met QAPP control criteria. However, the laboratory case narratives and/or footnotes in the laboratory data packages were reviewed by the data validator and there were a few exceptions noted.

The recoveries of continuing calibration verification (CCV) standards were above criteria for TPH-diesel by method CALUFT, indicating the associated sample results are possibly biased high. Twenty-one associated detected results were qualified as estimated and flagged "J".

The recoveries of CCV standards were below criteria for TPH-motor oil by method CALUFT, indicating the associated sample results are possibly biased low. Five associated non-detected results were qualified as estimated and flagged "UJ".

The recoveries of CCV standards were above criteria for Total TPH by method CALUFT, indicating the associated sample results are possibly biased high. Sixteen associated detected results were qualified as estimated and flagged "J".

The recovery of a CCV standard was above criteria for naphthalene by method SW8260B, indicating the associated sample results are possibly biased high. Two associated detected results were qualified as estimated and flagged "J".

The recovery of a CCV standard was above criteria for naphthalene by method SW8310, indicating the associated sample results are possibly biased high. Two associated detected results were qualified as estimated and flagged "J".

Method Blanks

Method blanks were analyzed at the required frequency and were free of contamination with one exception.

TPH-motor oil was detected above the RL in a method blank for method CALUFT. Two associated samples were detected for TPH-motor oil at concentrations less than five times the blank concentration. The results were qualified as not detected and flagged "U".

Field Blanks

EBs and TBs were collected as a percentage of the overall number of field samples collected and not on a site, location or daily basis. The associated field samples were evaluated against the maximum concentration detected in the field blanks. No data required qualification due to detections in the field blanks.

Field Duplicates

Twenty-two FD sets were collected and analyzed with this event. Only detected analytes in the FD pair were evaluated. The relative percent difference (RPD) criteria were met with two exceptions.

The FD RPD criterion was exceeded for benzene and 1,1-dichloroethane in the ASE-52A-6C2/PL-516-6C2 FD pair. The detected results in the normal and duplicate were qualified as estimated and flagged "J".

A list of FDs and associated parent samples is included below.

Table 5 – List of Field Duplicates	
Field Duplicate Sample ID	**Associated Parent Sample ID**
PL-502-6B3	ASE-124A-6B3
PL-502-6C1	ASE-126A-6C1
PL-503-6B3	ASE-112A-6B3
PL-503-6C2	ASE-75B-6C2
PL-504-6B3	ASE-110A-6B3
PL-504-6C2	ASE-59A-6C2
PL-505-6B3	PL-2102-6B3
PL-505-6C2	ASE-36A-6C2
PL-506-6B3	ASE-91A-6B3
PL-506-6C2	BC-14-6C2
PL-507-6B3	ASE-66A-6B3
PL-507-6C2	ASE-124A-6C2
PL-508-6B3	ASE-115A-6B3
PL-509-6C2	ASE-98A-6C2
PL-511-6C2	ASE-87A-6C2
PL-513-6C2	PL-210A-6C2
PL-516-6C2	ASE-52A-6C2
PL-519-6C2	ASE-63A-6C2
PL-520-6C2	ASE-116A-6C2

Surrogates

Surrogates were recovered within laboratory established QC limits with a few exceptions.

Surrogate recoveries were below criteria in two samples for method CALUFT, indicating the associated sample results are possibly biased low. The associated non-detected results were flagged "UJ" and the detected results were flagged "J".

Surrogate recoveries were above criteria in four samples for method CALUFT, indicating the associated sample results are possibly biased high. All associated detected results were qualified as estimated and flagged "J".

Surrogate recoveries were above criteria in two samples for method SW8015, indicating the associated sample results are possibly biased high. All associated detected results were qualified as estimated and flagged "J".

Surrogate recoveries were above criteria in three samples for method SW8260, indicating the associated sample results are possibly biased high. All associated detected results were qualified as estimated and flagged "J".

Laboratory Control Samples

LCSs were analyzed as required and generally met QC criteria.

The recovery of TPH-diesel was below criteria in several LCS/LCSD sets for method SW8015, indicating the associated sample results are possibly biased low. Associated results were qualified as estimated, nine detected results were flagged "J" and 17 non-detected results were flagged "UJ".

The recovery of iodomethane was below criteria in a LCS for method SW8260, indicating the associated sample results are possibly biased low. Two associated non-detected results were qualified as estimated and flagged "UJ".

Matrix Spikes

The results of MS/MSD analyses provide information about the possible influence of the matrix on either accuracy or precision of the measurements. In general, MS/MSD recoveries and the associated RPD met criteria. Below are summaries of incidences where either the recovery or RPD did not meet criteria that resulted in data qualification.

The MS and MSD performed on sample ASE-89A-6B3 for method SW8015 were recovered greater than criteria for TPH-diesel. The associated detected sample result was qualified as estimated and "J" flagged.

The MS performed on sample ASE-98A-6C2 for method SW8015 was recovered less than criteria for TPH-diesel. The associated non-detected sample result was qualified as estimated and "UJ" flagged.

The MS performed on sample ASE-20B-6C2 for method SW8260 was recovered less than criteria for styrene and vinyl acetate. The associated non-detected sample results were qualified as estimated and "UJ" flagged.

The MS and MSD performed on sample ASE-39A-6B3 for method SW8260 were recovered less than criteria for naphthalene. The associated non-detected sample result was qualified as estimated and "UJ" flagged.

The MS and MSD performed on sample ASE-47B-6C2 for method SW8260 were recovered less than criteria for trichloroethene. The associated non-detected sample result was qualified as estimated and "UJ" flagged.

The MS performed on sample ASE-56A-6C2 for method SW8260 was recovered less than criteria for 1,1-dichloroethene, isopropylbenzene, n-propylbenzene and xylenes. The associated detected sample results were qualified as estimated and "J" flagged.

The MS and MSD performed on sample ASE-89A-6B3 for method SW8260 were recovered less than criteria for 1,1-dichloroethane. The associated detected sample result was qualified as estimated and "J" flagged.

The MS and MSD performed on sample ASE-96A-6C2 for method SW8260 were recovered greater than criteria for methyl-tert-butyl ether. The associated detected sample result was qualified as estimated and "J" flagged. The MSD was recovered less than criteria for trans-1,2-dichloroethene and the associated non-detected result was flagged "U". Additionally, the RPD for the MS/MSD pair did not meet criteria for vinyl chloride and the associated detected result was flagged "J".

The MS and MSD performed on sample PL-2103-6C2 for method SW8260 were recovered less than criteria for bromoform, dichlorodifluoromethane and styrene. The associated non-detected sample results were qualified as estimated and "UJ" flagged.

The MS performed on sample PL-502-6C1 for method SW8260 was recovered greater than criteria for 1,1-dichloroethane. The associated detected sample result was qualified as estimated and "J" flagged.

Confirmation

The confirmation RPD criterion was exceeded for fluorene in six samples and for phenanthrene in four samples. The detected results were qualified as estimated and "J" flagged.

Internal Standards

Internal standard data was not supplied and could not be directly verified to have met QAPP control criteria. The laboratory case narratives and/or footnotes in the laboratory data package were reviewed by the data validator. No sample data were qualified based on the case narrative/footnote review for this event.

Tentatively Identified Compounds

Tentatively identified compounds were not reported by the laboratory.

Chain of Custody

Each sample was documented in a completed CoC and received at the laboratory in good condition.

Overall Assessment

The goal of this assessment is to demonstrate that a sufficient number of representative samples were collected and the resulting analytical data can be used to support the decision-making process. The procedures for assessing the precision, accuracy, representativeness, completeness, and comparability parameters were based on the USEPA Contract Laboratory NFG for Inorganic Data Review (2004) and Contract Laboratory NFG

for Organic Data Review (1999). The following summary highlights the PARCC findings for the above-defined events:

1. Two samples for SW8260 analysis were analyzed outside of holding time by 20 days, a factor greater than two times the holding-time criteria. A total of 121 non-detected results were rejected for project use and flagged "R". The completeness objective of 95 percent was still met for this method and overall completeness goals were met.
2. Less than one percent of the data were qualified due to low-level blank contamination. The degree to which blank contamination was observed is within reasonable method expectations.
3. Acenaphthene and naphthalene results by method SW8310 did not meet the QAPP RL objectives. Laboratory RLs for both analytes are below EPA Region 9 PRGs so no effect on data usability is observed.
4. Eight samples were analyzed diluted for method SW8260, resulting in raised RLs for non-detected analytes.
5. CCV exceedances were noted in the case narratives, resulting in 44 results qualified as estimated for methods CALUFT, SW8260, and SW8310.
6. LCS/LCSD recovery exceedances for methods SW8015 and SW8260 resulted in 28 results qualified as estimated.
7. Confirmation RPD exceedances for method SW8310 resulted in 10 results qualified as estimated.
8. The FD RPD criterion was exceeded for two analytes in one FD pair, resulting in four results qualified as estimated.
9. Surrogate recovery exceedances for methods CALUFT, SW8015 and SW8260 resulted in 24 results qualified as estimated.
10. MS/MSD recovery and RPD exceedances for methods SW8015 and SW8260 suggest matrix effect in several samples, 18 results were qualified as estimated.
11. The precision and accuracy of the data, as measured by field and laboratory QC indicators, suggest that the project goals have been met

Table 6 – Validation Findings

Notes:

CCVH = Continuing calibration recovery greater than upper control limit

CCVL = Continuing calibration recovery less than lower control limit

CFP = Confirmation precision exceeded

FD = Field duplicate exceeds RPD criteria

HTA – Analytical holding time exceeded

LBH = Laboratory blank contamination greater than the RL

LCSL – LCS recovery less than lower limit.

LCSDL – LCS duplicate recovery less than lower limit.

MSL – Matrix spike recovery less than the lower limit.

MSDL - Matrix spike duplicate recovery less than the lower limit.

MSDP – Matrix spike duplicate RPD criteria exceedance.

MSH – Matrix spike recovery greater than the upper limit.

MSDH - Matrix spike duplicate recovery greater than the upper limit.

SSH – Surrogate recovery greater than upper limit.

SSL – Surrogate recovery less than lower limit.

LABORATORY REPORT

Prepared For: CH2M Hill - Tempe
2625 S. Plaza Drive, Ste. 300
Tempe, AZ 85282
Attention: Jennifer Holland

Project: HW Quarterly / UST Sampling Program

Sampled: 06/28/06
Received: 06/28/06
Issued: 07/26/06 14:51

NELAP #01109CA Arizona DHS#AZ0426

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

CH2M Hill - Tempe 2625 S. Plaza Drive, Ste. 300 Tempe, AZ 85282 Attention: Jennifer Holland	Project ID: HW Quarterly / UST Sampling Program Report Number: PPF0816	Sampled: 06/28/06 Received: 06/28/06

SAMPLE RECEIPT:	Samples were received intact, at 2°C, on ice and with chain of custody documentation.
HOLDING TIMES:	All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
PRESERVATION:	Samples requiring preservation were verified prior to sample analysis.
QA/QC CRITERIA:	All analyses met method criteria, except as noted in the report with data qualifiers.
COMMENTS:	N1: There is no MS/MSD data available for the batch due to the autosampler faulting prior to the MS/MSD being analyzed. The batch was accepted based on the LCS/LCSD results. N1: The second source calibration analyzed immediately following the calibration recovered high and outside of acceptance limits for Vinyl Acetate and TAME. All associated samples are non-detect for these compounds and therefore should not be impacted.
SUBCONTRACTED:	Refer to the last page for specific subcontract laboratory information included in this report.

Sampled: 06/28/06
Received: 06/28/06

DATA QUALIFIERS AND DEFINITIONS

C6	Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7	Sample RPD between the primary and confirmatory analysis exceeded 40% per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.
L3	The associated blank spike recovery was above method acceptance limits.
N1	See case narrative.
Q8	Insufficient sample received to meet method QC requirements. Batch QC satisfies ADEQ policies 0154 and 0155.
R6	LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

Re: PPF0816
Work Order No.: 0606523

Dear Ken,

Attached is the original Report of Analysis from Columbia Analytical Services, Inc. (AZ0604) for the samples received on 6/29/06. The following analysis was performed:

Method EPA 8015B – Diesel Range Organics

If you have any questions regarding the results, please call me. We appreciate your business and thank you for choosing Transwest Geochem.

Sincerely,

Carlene McCutchen

RE: PPF0816/0606523

Dear Carlene:

Enclosed are the results of the sample(s) submitted to our laboratory on June 30, 2006. For your reference, these analyses have been assigned our service request number D0600786.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 103. You may also contact me via email at EWilson@canoga.caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Ed Wilson
Project Chemist

Arizona Data Qualifiers
Revision 2.0, 11/26/2003

Developed by the Sub-committee of the
Arizona Environmental Laboratory Advisory Committee

Microbiology:
A1 = Too numerous to count.
A2 = Sample incubation period exceeded method requirement.
A3 = Sample incubation period was shorter than method requirement.
A4 = Target organism detected in associated method blank.
A5 = Incubator/water bath temperature was outside method requirements.
A6 = Target organism not detected in associated positive control.
A7 = Micro sample received without adequate headspace.

Method/calibration blank:
B1 = Target analyte detected in method blank at or above the method reporting limit.
B2 = Non-target analyte detected in method blank and sample, producing interference.
B3 = Target analyte detected in calibration blank at or above the method reporting limit.
B4 = Target analyte detected in blank at/above method acceptance criteria.
B5 = Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL.
B6 = Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL.
B7 = Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank.

Confirmation:
C1 = Confirmatory analysis not performed as required by the method.
C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:
D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

Estimated concentration:
E1 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not possible due to insufficient sample.
E2 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E3 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to holding time requirements.

E4 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL).
E5 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL), but not confirmed by alternate analysis.
E6 = Concentration estimated. Internal standard recoveries did not meet method acceptance criteria.
E7 = Concentration estimated. Internal standard recoveries did not meet laboratory acceptance criteria.
E8 = Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Hold time:
H1 = Sample analysis performed past holding time.
H2 = Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
H3 = Sample was received and analyzed past holding time.
H4 = Sample was extracted past required extraction holding time, but analyzed within analysis holding time.

BOD:
K1 = The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/L. Any reported result is an estimated value.
K2 = The sample dilutions set up for the BOD analysis did not meet the criteria of a residual dissolved oxygen of at least 1 mg/L. Any reported result is an estimated value.
K4 = The seed depletion was outside the method acceptance limits. The reported result is an estimated value.
K5 = The dilution water D.O. depletion was > 0.2 mg/L.
K6 = Glucose/glutamic acid BOD was below method acceptance criteria.
K7 = A discrepancy between the BOD and COD results has been verified by reanalysis of the sample for COD.
K8 = Glucose/glutamic acid BOD was above method acceptance levels.

Laboratory fortified blank/blank spike:

L1 = The associated blank spike recovery was above laboratory acceptance limits.
L2 = The associated blank spike recovery was below laboratory acceptance limits.
L3 = The associated blank spike recovery was above method acceptance limits.
L4 = The associated blank spike recovery was below method acceptance limits.

Matrix spike:
M1 = Matrix spike recovery was high, the method control sample recovery was acceptable.
M2 = Matrix spike recovery was low, the method control sample recovery was acceptable.
M3 = The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
M4 = The analysis of the spiked sample required a dilution such that the spike concentration was diluted below the reporting limit. The method control sample recovery was acceptable.
M5 = Analyte concentration was determined by the method of standard addition (MSA).

M6 = Matrix spike recovery was high. Data reported per ADEQ policy 0154.000.
M7 = Matrix spike recovery was low. Data reported per ADEQ policy 0154.000.

General:
N1 = See case narrative.
N2 = See corrective action report.
N3 = The analysis meets all method requirements. See case narrative.

Sample quality:
Q1 = Sample integrity was not maintained. See case narrative.
Q2 = Sample received with headspace.
Q3 = Sample received with improper chemical preservation.
Q4 = Sample received and analyzed without chemical preservation.
Q5 = Sample received with inadequate chemical preservation, but preserved by the laboratory.
Q6 = Sample was received above recommended temperature.
Q7 = Sample inadequately dechlorinated.
Q8 = Insufficient sample received to meet method QC requirements. Batch QC requirements satisfies ADEQ policies 0154 and 0155.
Q9 = Insufficient sample received to meet method QC requirements.
Q10 = Sample received in inappropriate sample container.
Q11 = Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices.

Duplicates:
R1 = RPD exceeded the method control limit. See case narrative.
R2 = RPD exceeded the laboratory control limit. See case narrative.
R4 = MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
R5 = MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R6 = LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
R7 = LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R8 = Sample RPD exceeded the method control limit.
R9 = Sample RPD exceeded the laboratory control limit.
R10 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems.
R11 = The RPD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used.

Surrogate:
S1 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits.
S3 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample.
S4 = Surrogate recovery was above laboratory and method acceptance limits. No target analytes were detected in the sample.
S5 = Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits.
S6 = Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect.

S7 = Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect.
S8 = The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable.
S10 = Surrogate recovery was above laboratory and method acceptance limits. See Case narrative.
S11 = Surrogate recovery was high. Data reported per ADEQ policy 0154.000.
S12 = Surrogate recovery was low. Data reported per ADEQ policy 0154.000.

Method/analyte discrepancies:
T1 = Method approved by EPA, but not yet licensed by ADHS.
T2 = Cited ADHS licensed method does not contain this analyte as part of method compound list.
T3 = Method not promulgated either by EPA or ADHS.
T4 = Tentatively identified compound. Concentration is estimated and based on the closest internal standard.

Calibration verification:
V1 = CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
V2 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample.
V3 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative.
V4 = CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample.
V5 = CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B.
V6 = Data reported from one-point calibration criteria per ADEQ policy 0155.000.
V7 = Calibration verification recovery was above the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.
V8 = Calibration verification recovery was below the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.

Calibration:
W1 = The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA method 8000B.
W2 = The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C.

CASE NARRATIVE

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	Transwest Geochem, Inc.	**Service Request No.:**	D0600786
Project:	PPF0816	**Date Received:**	June 30, 2006
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

11 water samples were received for analysis at Columbia Analytical Services on June 30, 2006.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Diesel Range Organics by EPA Method 8015B

Continuing Calibration Verification Exceptions:
The upper control criterion was exceeded for the following analyte in Continuing Calibration Verification (CCV) F0712024: TPH-Diesel. Since the apparent problem equates to a potential high bias, the data quality is not affected. No further corrective action was required.

Surrogate Exceptions:
The lower control criterion was exceeded for the following surrogates in sample PPF0816-03: Triacontane and Octacosane. There is no more sample available for a re-analysis and client has been informed. No further corrective action could be taken.

The upper control criterion was exceeded for the following surrogates in sample PPF0816-13: Triacontane and Octacosane. The error associated with an elevated recovery equates to a high bias. The quality of the sample data is not significantly affected. No further corrective action was appropriate.

Matrix Spike Recovery Exceptions:
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

LABORATORY REPORT

Prepared For: CH2M Hill - Tempe
2625 S. Plaza Drive, Ste. 300
Tempe, AZ 85282
Attention: Jennifer Holland

Project: Sky Harbor HW Quarterly / UST Sampling Program

Sampled: 06/29/06
Received: 06/29/06
Revised: 08/24/06 12:07

NELAP #01109CA Arizona DHS#AZ0426

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

CH2M Hill - Tempe 2625 S. Plaza Drive, Ste. 300 Tempe, AZ 85282 Attention: Jennifer Holland	Project ID: Sky Harbor HW Quarterly / UST Sampling Program Report Number: PPF0847	Sampled: 06/29/06 Received: 06/29/06

SAMPLE RECEIPT:	Samples were received intact, at 2°C, on ice and with chain of custody documentation.
HOLDING TIMES:	Not all holding times were met. Results were qualified where the sample analysis did not occur within method specified holding time requirements.
PRESERVATION:	Samples requiring preservation were verified prior to sample analysis.
QA/QC CRITERIA:	All analyses met method criteria, except as noted in the report with data qualifiers.
COMMENTS:	N1: Reported for batch QC purposes only. See re-analysis (RE) for final results. N1a: Calibration Verification recovery was below the method control limit for this analyte. N1b: Concentration exceeds the calibration range and therefore result is semi-quantitative. N1c: The second source calibration verification analyzed immediately following the calibration recovered high and outside of acceptance limits for Vinyl Acetate and TAME. All associated samples are non-detect for these compounds and therefore should not be impacted. N1c: MS was above the acceptance limits for Iodomethane. All associated samples were ND or LRL therefore data not impacted. N1c: The second source continuing calibration verification analyzed immediately following the calibration recovered high and outside of acceptance limits for Vinly Acetate. All associated samples are non-detect and therefore should not be impacted. N1c: MS run past hold, results met QC acceptance criteria. N1c: Detect in sample with high CCV. Confirmed past hold with passing QC.
SUBCONTRACTED:	Refer to the last page for specific subcontract laboratory information included in this report.
ADDITIONAL INFORMATION:	This revised report contains the benzene result for the rerun of PPF0847-08.

Sample ID: PPF0847-06 (ASE-112A-6B3 - Water) - cont.								
Reporting Units: ug/l								
Iodomethane	EPA 8260B	P6G1205	2.0	ND	1	7/12/2006	7/13/2006	
Isopropylbenzene	EPA 8260B	P6G1205	2.0	**24**	1	7/12/2006	7/13/2006	
p-Isopropyltoluene	EPA 8260B	P6G1205	2.0	ND	1	7/12/2006	7/13/2006	
Methylene chloride	EPA 8260B	P6G1205	5.0	ND	1	7/12/2006	7/13/2006	
4-Methyl-2-pentanone (MIBK)	EPA 8260B	P6G1205	10	ND	1	7/12/2006	7/13/2006	
Naphthalene	EPA 8260B	P6G1205	2.0	**25**	1	7/12/2006	7/13/2006	V1, N1c
n-Propylbenzene	EPA 8260B	P6G1205	2.0	**14**	1	7/12/2006	7/13/2006	
Styrene	EPA 8260B	P6G1205	2.0	ND	1	7/12/2006	7/13/2006	
1,1,1,2-Tetrachloroethane	EPA 8260B	P6G1205	5.0	ND	1	7/12/2006	7/13/2006	
1,1,2,2-Tetrachloroethane	EPA 8260B	P6G1205	2.0	ND	1	7/12/2006	7/13/2006	
Tetrachloroethene	EPA 8260B	P6G1205	2.0	ND	1	7/12/2006	7/13/2006	
Toluene	EPA 8260B	P6G1205	2.0	ND	1	7/12/2006	7/13/2006	
1,2,3-Trichlorobenzene	EPA 8260B	P6G1205	5.0	ND	1	7/12/2006	7/13/2006	V1
1,2,4-Trichlorobenzene	EPA 8260B	P6G1205	5.0	ND	1	7/12/2006	7/13/2006	
1,1,1-Trichloroethane	EPA 8260B	P6G1205	2.0	ND	1	7/12/2006	7/13/2006	
1,1,2-Trichloroethane	EPA 8260B	P6G1205	2.0	ND	1	7/12/2006	7/13/2006	
Trichloroethene	EPA 8260B	P6G1205	2.0	ND	1	7/12/2006	7/13/2006	
Trichlorofluoromethane	EPA 8260B	P6G1205	5.0	ND	1	7/12/2006	7/13/2006	
1,2,3-Trichloropropane	EPA 8260B	P6G1205	10	ND	1	7/12/2006	7/13/2006	
1,2,4-Trimethylbenzene	EPA 8260B	P6G1205	2.0	**17**	1	7/12/2006	7/13/2006	
1,3,5-Trimethylbenzene	EPA 8260B	P6G1205	2.0	ND	1	7/12/2006	7/13/2006	
Vinyl acetate	EPA 8260B	P6G1205	25	ND	1	7/12/2006	7/13/2006	V1, N1c
Vinyl chloride	EPA 8260B	P6G1205	1.7	ND	1	7/12/2006	7/13/2006	
Xylenes, Total	EPA 8260B	P6G1205	3.0	**20**	1	7/12/2006	7/13/2006	
Surrogate: Dibromofluoromethane (80-130%)				*103 %*				
Surrogate: Toluene-d8 (80-120%)				*102 %*				
Surrogate: 4-Bromofluorobenzene (80-120%)				*96 %*

Sampled: 06/29/06
Received: 06/29/06

DATA QUALIFIERS AND DEFINITIONS

C6	Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7	Sample RPD between the primary and confirmatory analysis exceeded 40% per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.
H1	Sample analysis performed past holding time.
L3	The associated blank spike recovery was above method acceptance limits.
M1	Matrix spike recovery was high, the method control sample recovery was acceptable.
M2	Matrix spike recovery was low, the method control sample recovery was acceptable.
M3	The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
N1	See case narrative.
Q8	Insufficient sample received to meet method QC requirements. Batch QC satisfies ADEQ policies 0154 and 0155.
R4	MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
R6	LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

Re: PPF0847
Work Order No.: 0606527

Dear Ken,

Attached is the original Report of Analysis from Columbia Analytical Services, Inc. (AZ0604) for the samples received on 6/29/06. The following analysis was performed:

Method EPA 8015B – Diesel Range Organics

If you have any questions regarding the results, please call me. We appreciate your business and thank you for choosing Transwest Geochem.

Sincerely,

Carlene McCutchen

RE: PPF0847/0606527

Dear Carlene:

Enclosed are the results of the sample(s) submitted to our laboratory on June 30, 2006. For your reference, these analyses have been assigned our service request number D0600785.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 103. You may also contact me via email at EWilson@canoga.caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Ed Wilson
Project Chemist

Arizona Data Qualifiers
Revision 2.0, 11/26/2003

Developed by the Sub-committee of the
Arizona Environmental Laboratory Advisory Committee

Microbiology:
A1 = Too numerous to count.
A2 = Sample incubation period exceeded method requirement.
A3 = Sample incubation period was shorter than method requirement.
A4 = Target organism detected in associated method blank.
A5 = Incubator/water bath temperature was outside method requirements.
A6 = Target organism not detected in associated positive control.
A7 = Micro sample received without adequate headspace.

Method/calibration blank:
B1 = Target analyte detected in method blank at or above the method reporting limit.
B2 = Non-target analyte detected in method blank and sample, producing interference.
B3 = Target analyte detected in calibration blank at or above the method reporting limit.
B4 = Target analyte detected in blank at/above method acceptance criteria.
B5 = Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL.
B6 = Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL.
B7 = Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank.

Confirmation:
C1 = Confirmatory analysis not performed as required by the method.
C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:
D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

Estimated concentration:
E1 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not possible due to insufficient sample.
E2 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E3 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to holding time requirements.

E4 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL).
E5 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL), but not confirmed by alternate analysis.
E6 = Concentration estimated. Internal standard recoveries did not meet method acceptance criteria.
E7 = Concentration estimated. Internal standard recoveries did not meet laboratory acceptance criteria.
E8 = Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Hold time:
H1 = Sample analysis performed past holding time.
H2 = Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
H3 = Sample was received and analyzed past holding time.
H4 = Sample was extracted past required extraction holding time, but analyzed within analysis holding time.

BOD:
K1 = The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/L. Any reported result is an estimated value.
K2 = The sample dilutions set up for the BOD analysis did not meet the criteria of a residual dissolved oxygen of at least 1 mg/L. Any reported result is an estimated value.
K4 = The seed depletion was outside the method acceptance limits. The reported result is an estimated value.
K5 = The dilution water D.O. depletion was > 0.2 mg/L.
K6 = Glucose/glutamic acid BOD was below method acceptance criteria.
K7 = A discrepancy between the BOD and COD results has been verified by reanalysis of the sample for COD.
K8 = Glucose/glutamic acid BOD was above method acceptance levels.

Laboratory fortified blank/blank spike:

L1 = The associated blank spike recovery was above laboratory acceptance limits.
L2 = The associated blank spike recovery was below laboratory acceptance limits.
L3 = The associated blank spike recovery was above method acceptance limits.
L4 = The associated blank spike recovery was below method acceptance limits.

Matrix spike:
M1 = Matrix spike recovery was high, the method control sample recovery was acceptable.
M2 = Matrix spike recovery was low, the method control sample recovery was acceptable.
M3 = The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
M4 = The analysis of the spiked sample required a dilution such that the spike concentration was diluted below the reporting limit. The method control sample recovery was acceptable.
M5 = Analyte concentration was determined by the method of standard addition (MSA).

M6 = Matrix spike recovery was high. Data reported per ADEQ policy 0154.000.
M7 = Matrix spike recovery was low. Data reported per ADEQ policy 0154.000.

General:
N1 = See case narrative.
N2 = See corrective action report.
N3 = The analysis meets all method requirements. See case narrative.

Sample quality:
Q1 = Sample integrity was not maintained. See case narrative.
Q2 = Sample received with headspace.
Q3 = Sample received with improper chemical preservation.
Q4 = Sample received and analyzed without chemical preservation.
Q5 = Sample received with inadequate chemical preservation, but preserved by the laboratory.
Q6 = Sample was received above recommended temperature.
Q7 = Sample inadequately dechlorinated.
Q8 = Insufficient sample received to meet method QC requirements. Batch QC requirements satisfies ADEQ policies 0154 and 0155.
Q9 = Insufficient sample received to meet method QC requirements.
Q10 = Sample received in inappropriate sample container.
Q11 = Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices.

Duplicates:
R1 = RPD exceeded the method control limit. See case narrative.
R2 = RPD exceeded the laboratory control limit. See case narrative.
R4 = MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
R5 = MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R6 = LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
R7 = LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R8 = Sample RPD exceeded the method control limit.
R9 = Sample RPD exceeded the laboratory control limit.
R10 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems.
R11 = The RPD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used.

Surrogate:
S1 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits.
S3 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample.
S4 = Surrogate recovery was above laboratory and method acceptance limits. No target analytes were detected in the sample.
S5 = Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits.
S6 = Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect.

S7 = Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect.
S8 = The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable.
S10 = Surrogate recovery was above laboratory and method acceptance limits. See Case narrative.
S11 = Surrogate recovery was high. Data reported per ADEQ policy 0154.000.
S12 = Surrogate recovery was low. Data reported per ADEQ policy 0154.000.

Method/analyte discrepancies:
T1 = Method approved by EPA, but not yet licensed by ADHS.
T2 = Cited ADHS licensed method does not contain this analyte as part of method compound list.
T3 = Method not promulgated either by EPA or ADHS.
T4 = Tentatively identified compound. Concentration is estimated and based on the closest internal standard.

Calibration verification:
V1 = CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
V2 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample.
V3 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative.
V4 = CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample.
V5 = CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B.
V6 = Data reported from one-point calibration criteria per ADEQ policy 0155.000.
V7 = Calibration verification recovery was above the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.
V8 = Calibration verification recovery was below the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.

Calibration:
W1 = The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA method 8000B.
W2 = The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C.

CASE NARRATIVE

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	Transwest Geochem, Inc.	**Service Request No.:**	D0600785
Project:	PPF0847	**Date Received:**	June 30, 2006
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

11 water samples were received for analysis at Columbia Analytical Services on June 30, 2006.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Diesel Range Organics by EPA Method 8015B

Surrogate Exceptions:
The upper control criterion was exceeded for the following surrogate in samples PPF0847-04, and PPF0804-06: Triacontane. The error associated with an elevated recovery equates to a high bias. The quality of the sample data is not significantly affected. No further corrective action was appropriate.

Matrix Spike Recovery and Relative Percent Difference Exceptions:
Due to the presence of target analyte in native sample, the upper control criteria was exceeded for TPH-Diesel in Matrix Spike (MS) PPF0847-08MS. Recoveries in the Laboratory Control Sample (LCS) and the Duplicate Matrix Spike (DMS) were acceptable, indicating the analytical batch was in control. No further corrective action was necessary.

Prepared For: CH2M Hill - Tempe
2625 S. Plaza Drive, Ste. 300
Tempe, AZ 85282
Attention: Jennifer Holland

Project: Sky Harbor HW Quarterly / UST Sampling Program

Sampled: 06/30/06
Received: 06/30/06
Issued: 07/23/06 11:11

NELAP #01109CA Arizona DHS#AZ0426

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

CH2M Hill - Tempe	Project ID: Sky Harbor HW Quarterly / UST Sampling Program	
2625 S. Plaza Drive, Ste. 300		Sampled: 06/30/06
Tempe, AZ 85282	Report Number: PPF0892	Received: 06/30/06
Attention: Jennifer Holland		

SAMPLE RECEIPT:	Samples were received intact, at 3°C, on ice and with chain of custody documentation.
HOLDING TIMES:	All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
PRESERVATION:	Samples requiring preservation were verified prior to sample analysis.
QA/QC CRITERIA:	All analyses met method criteria, except as noted in the report with data qualifiers.
COMMENTS:	N1: The second source continuing calibration verification analyzed immediately following the calibration recovered high and outside of acceptance limits for Vinly Acetate. All associated samples are non-detect and therefore should not be impacted. N-1= MS run past hold, results met QC acceptance criteria. N-1= Detect in sample with high CCV. Confirmed past hold with passing QC.
SUBCONTRACTED:	Refer to the last page for specific subcontract laboratory information included in this report.

DATA QUALIFIERS AND DEFINITIONS

L3	The associated blank spike recovery was above method acceptance limits.
N1	See case narrative.
Q8	Insufficient sample received to meet method QC requirements. Batch QC satisfies ADEQ policies 0154 and 0155.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

Re: PPF0892
Work Order No.: 0606558

Dear Ken,

Attached is the original Report of Analysis from Columbia Analytical Services, Inc. (AZ0604) for the samples received on 6/30/06. The following analysis was performed:

Method EPA 8015B – Diesel Range Organics

If you have any questions regarding the results, please call me. We appreciate your business and thank you for choosing Transwest Geochem.

Sincerely,

Carlene McCutchen

RE: PPF0892

Dear Carlene:

Enclosed are the results of the sample(s) submitted to our laboratory on July 6, 2006. For your reference, these analyses have been assigned our service request number D0600801.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 103. You may also contact me via email at EWilson@canoga.caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Ed Wilson
Project Chemist

Arizona Data Qualifiers
Revision 2.0, 11/26/2003

Developed by the Sub-committee of the
Arizona Environmental Laboratory Advisory Committee

Microbiology:
A1 = Too numerous to count.
A2 = Sample incubation period exceeded method requirement.
A3 = Sample incubation period was shorter than method requirement.
A4 = Target organism detected in associated method blank.
A5 = Incubator/water bath temperature was outside method requirements.
A6 = Target organism not detected in associated positive control.
A7 = Micro sample received without adequate headspace.

Method/calibration blank:
B1 = Target analyte detected in method blank at or above the method reporting limit.
B2 = Non-target analyte detected in method blank and sample, producing interference.
B3 = Target analyte detected in calibration blank at or above the method reporting limit.
B4 = Target analyte detected in blank at/above method acceptance criteria.
B5 = Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL.
B6 = Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL.
B7 = Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank.

Confirmation:
C1 = Confirmatory analysis not performed as required by the method.
C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:
D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

Estimated concentration:
E1 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not possible due to insufficient sample.
E2 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E3 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to holding time requirements.

E4 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL).
E5 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL), but not confirmed by alternate analysis.
E6 = Concentration estimated. Internal standard recoveries did not meet method acceptance criteria.
E7 = Concentration estimated. Internal standard recoveries did not meet laboratory acceptance criteria.
E8 = Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Hold time:
H1 = Sample analysis performed past holding time.
H2 = Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
H3 = Sample was received and analyzed past holding time.
H4 = Sample was extracted past required extraction holding time, but analyzed within analysis holding time.

BOD:
K1 = The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/L. Any reported result is an estimated value.
K2 = The sample dilutions set up for the BOD analysis did not meet the criteria of a residual dissolved oxygen of at least 1 mg/L. Any reported result is an estimated value.
K4 = The seed depletion was outside the method acceptance limits. The reported result is an estimated value.
K5 = The dilution water D.O. depletion was > 0.2 mg/L.
K6 = Glucose/glutamic acid BOD was below method acceptance criteria.
K7 = A discrepancy between the BOD and COD results has been verified by reanalysis of the sample for COD.
K8 = Glucose/glutamic acid BOD was above method acceptance levels.

Laboratory fortified blank/blank spike:

L1 = The associated blank spike recovery was above laboratory acceptance limits.
L2 = The associated blank spike recovery was below laboratory acceptance limits.
L3 = The associated blank spike recovery was above method acceptance limits.
L4 = The associated blank spike recovery was below method acceptance limits.

Matrix spike:
M1 = Matrix spike recovery was high, the method control sample recovery was acceptable.
M2 = Matrix spike recovery was low, the method control sample recovery was acceptable.
M3 = The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
M4 = The analysis of the spiked sample required a dilution such that the spike concentration was diluted below the reporting limit. The method control sample recovery was acceptable.
M5 = Analyte concentration was determined by the method of standard addition (MSA).

M6 = Matrix spike recovery was high. Data reported per ADEQ policy 0154.000.
M7 = Matrix spike recovery was low. Data reported per ADEQ policy 0154.000.

General:
N1 = See case narrative.
N2 = See corrective action report.
N3 = The analysis meets all method requirements. See case narrative.

Sample quality:
Q1 = Sample integrity was not maintained. See case narrative.
Q2 = Sample received with headspace.
Q3 = Sample received with improper chemical preservation.
Q4 = Sample received and analyzed without chemical preservation.
Q5 = Sample received with inadequate chemical preservation, but preserved by the laboratory.
Q6 = Sample was received above recommended temperature.
Q7 = Sample inadequately dechlorinated.
Q8 = Insufficient sample received to meet method QC requirements. Batch QC requirements satisfies ADEQ policies 0154 and 0155.
Q9 = Insufficient sample received to meet method QC requirements.
Q10 = Sample received in inappropriate sample container.
Q11 = Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices.

Duplicates:
R1 = RPD exceeded the method control limit. See case narrative.
R2 = RPD exceeded the laboratory control limit. See case narrative.
R4 = MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
R5 = MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R6 = LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
R7 = LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R8 = Sample RPD exceeded the method control limit.
R9 = Sample RPD exceeded the laboratory control limit.
R10 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems.
R11 = The RPD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used.

Surrogate:
S1 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits.
S3 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample.
S4 = Surrogate recovery was above laboratory and method acceptance limits. No target analytes were detected in the sample.
S5 = Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits.
S6 = Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect.

S7 = Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect.
S8 = The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable.
S10 = Surrogate recovery was above laboratory and method acceptance limits. See Case narrative.
S11 = Surrogate recovery was high. Data reported per ADEQ policy 0154.000.
S12 = Surrogate recovery was low. Data reported per ADEQ policy 0154.000.

Method/analyte discrepancies:
T1 = Method approved by EPA, but not yet licensed by ADHS.
T2 = Cited ADHS licensed method does not contain this analyte as part of method compound list.
T3 = Method not promulgated either by EPA or ADHS.
T4 = Tentatively identified compound. Concentration is estimated and based on the closest internal standard.

Calibration verification:
V1 = CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
V2 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample.
V3 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative.
V4 = CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample.
V5 = CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B.
V6 = Data reported from one-point calibration criteria per ADEQ policy 0155.000.
V7 = Calibration verification recovery was above the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.
V8 = Calibration verification recovery was below the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.

Calibration:
W1 = The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA method 8000B.
W2 = The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C.

CASE NARRATIVE

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	Transwest Geochem, Inc.	**Service Request No.:**	D0600801
Project:	PPF0892	**Date Received:**	July 6, 2006
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

Seven water samples were received for analysis at Columbia Analytical Services on July 6, 2006.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Diesel Range Organics by EPA Method 8015B

Surrogate Exceptions:
The upper control criterion was exceeded for the following surrogates in samples PPF0892-04: Triacontane and Octacosane. The error associated with an elevated recovery equates to a high bias. The quality of the sample data is not significantly affected. No further corrective action was appropriate.

Matrix Spike Recovery Exceptions:
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

LABORATORY REPORT

Prepared For: CH2M Hill - Tempe
2625 S. Plaza Drive, Ste. 300
Tempe, AZ 85282
Attention: Jennifer Holland

Project: Sky Harbor HW Quarterly / UST Sampling Program

Sampled: 07/05/06
Received: 07/05/06
Issued: 07/24/06 09:12

NELAP #01109CA Arizona DHS#AZ0426

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

CH2M Hill - Tempe 2625 S. Plaza Drive, Ste. 300 Tempe, AZ 85282 Attention: Jennifer Holland	Project ID: Sky Harbor HW Quarterly / UST Sampling Program Report Number: PPG0034	Sampled: 07/05/06 Received: 07/05/06

SAMPLE RECEIPT:	Samples were received intact, at 2°C, on ice and with chain of custody documentation.
HOLDING TIMES:	All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
PRESERVATION:	Samples requiring preservation were verified prior to sample analysis.
QA/QC CRITERIA:	All analyses met method criteria, except as noted in the report with data qualifiers.
COMMENTS:	N1: The second source continuing calibration verification analyzed immediately following the calibration recovered high and outside of acceptance limits for Vinly Acetate. All associated samples are non-detect and therefore should not be impacted. N1: MS run past hold, results met QC acceptance criteria. N1: Detect in sample with high CCV. Confirmed past hold with passing QC. N1: The second source calibration verification analyzed immediately following the calibration recovered high and outside of acceptance limits for Vinyl Acetate. All associated samples are non-detect for these compounds and therefore should not be impacted.
SUBCONTRACTED:	Refer to the last page for specific subcontract laboratory information included in this report.

Re: PPG0034
Work Order No.: 0607035

Dear Ken,

Attached is the original Report of Analysis from Columbia Analytical Services, Inc. (AZ0604) for the samples received on 7/06/06. The following analysis was performed:

Method EPA 8015B – Diesel Range Organics

If you have any questions regarding the results, please call me. We appreciate your business and thank you for choosing Transwest Geochem.

Sincerely,

Carlene McCutchen

RE: PPG0034

Dear Carlene:

Enclosed are the results of the sample(s) submitted to our laboratory on July 7, 2006. For your reference, these analyses have been assigned our service request number D0600805.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 103. You may also contact me via email at EWilson@canoga.caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Ed Wilson
Project Chemist

Arizona Data Qualifiers

Revision 2.0, 11/26/2003

Developed by the Sub-committee of the
Arizona Environmental Laboratory Advisory Committee

Microbiology:

A1 = Too numerous to count.
A2 = Sample incubation period exceeded method requirement.
A3 = Sample incubation period was shorter than method requirement.
A4 = Target organism detected in associated method blank.
A5 = Incubator/water bath temperature was outside method requirements.
A6 = Target organism not detected in associated positive control.
A7 = Micro sample received without adequate headspace.

Method/calibration blank:

B1 = Target analyte detected in method blank at or above the method reporting limit.
B2 = Non-target analyte detected in method blank and sample, producing interference.
B3 = Target analyte detected in calibration blank at or above the method reporting limit.
B4 = Target analyte detected in blank at/above method acceptance criteria.
B5 = Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL.
B6 = Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL.
B7 = Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank.

Confirmation:

C1 = Confirmatory analysis not performed as required by the method.
C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:

D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

Estimated concentration:

E1 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not possible due to insufficient sample.
E2 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E3 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to holding time requirements.

E4 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL).
E5 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL), but not confirmed by alternate analysis.
E6 = Concentration estimated. Internal standard recoveries did not meet method acceptance criteria.
E7 = Concentration estimated. Internal standard recoveries did not meet laboratory acceptance criteria.
E8 = Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Hold time:
H1 = Sample analysis performed past holding time.
H2 = Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
H3 = Sample was received and analyzed past holding time.
H4 = Sample was extracted past required extraction holding time, but analyzed within analysis holding time.

BOD:
K1 = The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/L. Any reported result is an estimated value.
K2 = The sample dilutions set up for the BOD analysis did not meet the criteria of a residual dissolved oxygen of at least 1 mg/L. Any reported result is an estimated value.
K4 = The seed depletion was outside the method acceptance limits. The reported result is an estimated value.
K5 = The dilution water D:O. depletion was > 0.2 mg/L.
K6 = Glucose/glutamic acid BOD was below method acceptance criteria.
K7 = A discrepancy between the BOD and COD results has been verified by reanalysis of the sample for COD.
K8 = Glucose/glutamic acid BOD was above method acceptance levels.

Laboratory fortified blank/blank spike:

L1 = The associated blank spike recovery was above laboratory acceptance limits.
L2 = The associated blank spike recovery was below laboratory acceptance limits.
L3 = The associated blank spike recovery was above method acceptance limits.
L4 = The associated blank spike recovery was below method acceptance limits.

Matrix spike:
M1 = Matrix spike recovery was high, the method control sample recovery was acceptable.
M2 = Matrix spike recovery was low, the method control sample recovery was acceptable.
M3 = The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
M4 = The analysis of the spiked sample required a dilution such that the spike concentration was diluted below the reporting limit. The method control sample recovery was acceptable.
M5 = Analyte concentration was determined by the method of standard addition (MSA).

M6 = Matrix spike recovery was high. Data reported per ADEQ policy 0154.000.
M7 = Matrix spike recovery was low. Data reported per ADEQ policy 0154.000.

General:
N1 = See case narrative.
N2 = See corrective action report.
N3 = The analysis meets all method requirements. See case narrative.

Sample quality:
Q1 = Sample integrity was not maintained. See case narrative.
Q2 = Sample received with headspace.
Q3 = Sample received with improper chemical preservation.
Q4 = Sample received and analyzed without chemical preservation.
Q5 = Sample received with inadequate chemical preservation, but preserved by the laboratory.
Q6 = Sample was received above recommended temperature.
Q7 = Sample inadequately dechlorinated.
Q8 = Insufficient sample received to meet method QC requirements. Batch QC requirements satisfies ADEQ policies 0154 and 0155.
Q9 = Insufficient sample received to meet method QC requirements.
Q10 = Sample received in inappropriate sample container.
Q11 = Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices.

Duplicates:
R1 = RPD exceeded the method control limit. See case narrative.
R2 = RPD exceeded the laboratory control limit. See case narrative.
R4 = MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
R5 = MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R6 = LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
R7 = LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R8 = Sample RPD exceeded the method control limit.
R9 = Sample RPD exceeded the laboratory control limit.
R10 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems.
R11 = The RPD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used.

Surrogate:
S1 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits.
S3 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample.
S4 = Surrogate recovery was above laboratory and method acceptance limits. No target analytes were detected in the sample.
S5 = Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits.
S6 = Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect.

S7 = Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect.
S8 = The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable.
S10 = Surrogate recovery was above laboratory and method acceptance limits. See Case narrative.
S11 = Surrogate recovery was high. Data reported per ADEQ policy 0154.000.
S12 = Surrogate recovery was low. Data reported per ADEQ policy 0154.000.

Method/analyte discrepancies:
T1 = Method approved by EPA, but not yet licensed by ADHS.
T2 = Cited ADHS licensed method does not contain this analyte as part of method compound list.
T3 = Method not promulgated either by EPA or ADHS.
T4 = Tentatively identified compound. Concentration is estimated and based on the closest internal standard.

Calibration verification:
V1 = CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
V2 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample.
V3 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative.
V4 = CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample.
V5 = CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B.
V6 = Data reported from one-point calibration criteria per ADEQ policy 0155.000.
V7 = Calibration verification recovery was above the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.
V8 = Calibration verification recovery was below the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.

Calibration:
W1 = The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA method 8000B.
W2 = The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C.

CASE NARRATIVE

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	Transwest Geochem, Inc.	**Service Request No.:**	D0600805
Project:	PPG0034	**Date Received:**	July 7, 2006
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

Ten water samples were received for analysis at Columbia Analytical Services on July 7, 2006.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Diesel Range Organics by EPA Method 8015B

Matrix Spike Recovery Exceptions:
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

Approved by: _____ **Date:** 7/19/06

LABORATORY REPORT

Prepared For: CH2M Hill - Tempe
2625 S. Plaza Drive, Ste. 300
Tempe, AZ 85282
Attention: Jennifer Holland

Project: Sky Harbor HW Quarterly / UST Sampling Program

Sampled: 07/06/06
Received: 07/06/06
Issued: 07/26/06 15:33

NELAP #01109CA Arizona DHS#AZ0426

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

CH2M Hill - Tempe 2625 S. Plaza Drive, Ste. 300 Tempe, AZ 85282 Attention: Jennifer Holland	Project ID: Sky Harbor HW Quarterly / UST Sampling Program Report Number: PPG0084	Sampled: 07/06/06 Received: 07/06/06

SAMPLE RECEIPT:	Samples were received intact, at 3°C, on ice and with chain of custody documentation.
HOLDING TIMES:	All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
PRESERVATION:	Samples requiring preservation were verified prior to sample analysis.
QA/QC CRITERIA:	All analyses met method criteria, except as noted in the report with data qualifiers.
COMMENTS:	N1: The second source continuing calibration verification analyzed immediately following the calibration recovered high and outside of acceptance limits for Vinly Acetate and TAME. All associated samples are non-detect and therefore should not be impacted.
SUBCONTRACTED:	Refer to the last page for specific subcontract laboratory information included in this report.

Sampled: 07/06/06
Received: 07/06/06

DATA QUALIFIERS AND DEFINITIONS

C7	Sample RPD between the primary and confirmatory analysis exceeded 40% per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.
D1	Sample required dilution due to matrix.
L3	The associated blank spike recovery was above method acceptance limits.
N1	See case narrative.
Q8	Insufficient sample received to meet method QC requirements. Batch QC satisfies ADEQ policies 0154 and 0155.
R6	LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

Re: PPG0084
Work Order No.: 0607072

Dear Ken,

Attached is the original Report of Analysis from Columbia Analytical Services, Inc. (AZ0604) for the samples received on 7/07/06. The following analysis was performed:

Method EPA 8015B – Diesel Range Organics

If you have any questions regarding the results, please call me. We appreciate your business and thank you for choosing Transwest Geochem.

Sincerely,

for Carlene McCutchen

RE: PPG0084

Dear Carlene:

Enclosed are the results of the sample(s) submitted to our laboratory on July 11, 2006. For your reference, these analyses have been assigned our service request number D0600837.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 103. You may also contact me via email at EWilson@canoga.caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Ed Wilson
Project Chemist

Arizona Data Qualifiers
Revision 2.0, 11/26/2003

Developed by the Sub-committee of the
Arizona Environmental Laboratory Advisory Committee

Microbiology:
A1 = Too numerous to count.
A2 = Sample incubation period exceeded method requirement.
A3 = Sample incubation period was shorter than method requirement.
A4 = Target organism detected in associated method blank.
A5 = Incubator/water bath temperature was outside method requirements.
A6 = Target organism not detected in associated positive control.
A7 = Micro sample received without adequate headspace.

Method/calibration blank:
B1 = Target analyte detected in method blank at or above the method reporting limit.
B2 = Non-target analyte detected in method blank and sample, producing interference.
B3 = Target analyte detected in calibration blank at or above the method reporting limit.
B4 = Target analyte detected in blank at/above method acceptance criteria.
B5 = Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL.
B6 = Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL.
B7 = Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank.

Confirmation:
C1 = Confirmatory analysis not performed as required by the method.
C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:
D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

Estimated concentration:
E1 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not possible due to insufficient sample.
E2 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E3 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to holding time requirements.

E4 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL).
E5 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL), but not confirmed by alternate analysis.
E6 = Concentration estimated. Internal standard recoveries did not meet method acceptance criteria.
E7 = Concentration estimated. Internal standard recoveries did not meet laboratory acceptance criteria.
E8 = Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Hold time:
H1 = Sample analysis performed past holding time.
H2 = Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
H3 = Sample was received and analyzed past holding time.
H4 = Sample was extracted past required extraction holding time, but analyzed within analysis holding time.

BOD:
K1 = The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/L. Any reported result is an estimated value.
K2 = The sample dilutions set up for the BOD analysis did not meet the criteria of a residual dissolved oxygen of at least 1 mg/L. Any reported result is an estimated value.
K4 = The seed depletion was outside the method acceptance limits. The reported result is an estimated value.
K5 = The dilution water D.O. depletion was > 0.2 mg/L.
K6 = Glucose/glutamic acid BOD was below method acceptance criteria.
K7 = A discrepancy between the BOD and COD results has been verified by reanalysis of the sample for COD.
K8 = Glucose/glutamic acid BOD was above method acceptance levels.

Laboratory fortified blank/blank spike:

L1 = The associated blank spike recovery was above laboratory acceptance limits.
L2 = The associated blank spike recovery was below laboratory acceptance limits.
L3 = The associated blank spike recovery was above method acceptance limits.
L4 = The associated blank spike recovery was below method acceptance limits.

Matrix spike:
M1 = Matrix spike recovery was high, the method control sample recovery was acceptable.
M2 = Matrix spike recovery was low, the method control sample recovery was acceptable.
M3 = The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
M4 = The analysis of the spiked sample required a dilution such that the spike concentration was diluted below the reporting limit. The method control sample recovery was acceptable.
M5 = Analyte concentration was determined by the method of standard addition (MSA).

M6 = Matrix spike recovery was high. Data reported per ADEQ policy 0154.000.
M7 = Matrix spike recovery was low. Data reported per ADEQ policy 0154.000.

General:
N1 = See case narrative.
N2 = See corrective action report.
N3 = The analysis meets all method requirements. See case narrative.

Sample quality:
Q1 = Sample integrity was not maintained. See case narrative.
Q2 = Sample received with headspace.
Q3 = Sample received with improper chemical preservation.
Q4 = Sample received and analyzed without chemical preservation.
Q5 = Sample received with inadequate chemical preservation, but preserved by the laboratory.
Q6 = Sample was received above recommended temperature.
Q7 = Sample inadequately dechlorinated.
Q8 = Insufficient sample received to meet method QC requirements. Batch QC requirements satisfies ADEQ policies 0154 and 0155.
Q9 = Insufficient sample received to meet method QC requirements.
Q10 = Sample received in inappropriate sample container.
Q11 = Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices.

Duplicates:
R1 = RPD exceeded the method control limit. See case narrative.
R2 = RPD exceeded the laboratory control limit. See case narrative.
R4 = MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
R5 = MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R6 = LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
R7 = LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R8 = Sample RPD exceeded the method control limit.
R9 = Sample RPD exceeded the laboratory control limit.
R10 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems.
R11 = The RPD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used.

Surrogate:
S1 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits.
S3 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample.
S4 = Surrogate recovery was above laboratory and method acceptance limits. No target analytes were detected in the sample.
S5 = Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits.
S6 = Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect.

S7 = Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect.
S8 = The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable.
S10 = Surrogate recovery was above laboratory and method acceptance limits. See Case narrative.
S11 = Surrogate recovery was high. Data reported per ADEQ policy 0154.000.
S12 = Surrogate recovery was low. Data reported per ADEQ policy 0154.000.

Method/analyte discrepancies:
T1 = Method approved by EPA, but not yet licensed by ADHS.
T2 = Cited ADHS licensed method does not contain this analyte as part of method compound list.
T3 = Method not promulgated either by EPA or ADHS.
T4 = Tentatively identified compound. Concentration is estimated and based on the closest internal standard.

Calibration verification:
V1 = CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
V2 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample.
V3 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative.
V4 = CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample.
V5 = CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B.
V6 = Data reported from one-point calibration criteria per ADEQ policy 0155.000.
V7 = Calibration verification recovery was above the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.
V8 = Calibration verification recovery was below the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.

Calibration:
W1 = The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA method 8000B.
W2 = The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C.

CASE NARRATIVE

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	Transwest Geochem, Inc.	**Service Request No.:**	D0600837
Project:	PPG0084	**Date Received:**	July 11, 2006
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

Eight water samples were received for analysis at Columbia Analytical Services on July 11, 2006.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Diesel Range Organics by EPA Method 8015B

Continuing Calibration Verification Exceptions:
The %D for TPH-Diesel in closing Continuing Calibration Verification F0721011 (16.5%) exceeded the method criteria. Since the apparent problem equates to a potential high bias and all the QC recoveries were within control criteria; the data quality is not significantly affected. No further corrective action was taken.

Method Blank Exceptions:
The Method Blank DWB10713 contained low levels of TPH in HRO range above the Method Reporting Limit (MRL). In accordance with CAS QA/QC policy, all sample results less than twenty times the level found in the Method Blank are flagged as estimated. The samples were not re-extracted and reanalyzed because insufficient sample remained for additional testing.

Matrix Spike Recovery Exceptions:
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data

Elevated Method Reporting Limits:
Sample PPG0084-04 required dilution due to the presence of elevated levels of target analyte. The reporting limits are adjusted to reflect the dilution.

LABORATORY REPORT

Prepared For: CH2M Hill - Tempe
2625 S. Plaza Drive, Ste. 300
Tempe, AZ 85282
Attention: Jennifer Holland

Project: Sky Harbor HW Quarterly / UST Sampling Program

Sampled: 07/07/06
Received: 07/07/06
Issued: 07/26/06 15:47

NELAP #01109CA Arizona DHS#AZ0426

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

CH2M Hill - Tempe 2625 S. Plaza Drive, Ste. 300 Tempe, AZ 85282 Attention: Jennifer Holland	Project ID: Sky Harbor HW Quarterly / UST Sampling Program Report Number: PPG0141	Sampled: 07/07/06 Received: 07/07/06

SAMPLE RECEIPT:	Samples were received intact, at 3°C, on ice and with chain of custody documentation.
HOLDING TIMES:	All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
PRESERVATION:	Samples requiring preservation were verified prior to sample analysis.
QA/QC CRITERIA:	All analyses met method criteria, except as noted in the report with data qualifiers.
COMMENTS:	N1: No results were reported for the MS/MSD. The sample used for the MS/MSD required dilution due to the sample matrix. Because of this, the spike compounds were diluted below the detection limit. N1a: The second source continuing calibration verification analyzed immediately following the calibration recovered high and outside of acceptance limits for Vinly Acetate and TAME. All associated samples are non-detect and therefore should not be impacted.
SUBCONTRACTED:	Refer to the last page for specific subcontract laboratory information included in this report.

DATA QUALIFIERS AND DEFINITIONS

L3	The associated blank spike recovery was above method acceptance limits.
N1	See case narrative.
Q8	Insufficient sample received to meet method QC requirements. Batch QC satisfies ADEQ policies 0154 and 0155.
R6	LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

Re: PPG0141
Work Order No.: 0607089

Dear Ken,

Attached is the original Report of Analysis from Columbia Analytical Services, Inc. (AZ0604) for the samples received on 7/10/06. The following analysis was performed:

Method EPA 8015B – Diesel Range Organics

If you have any questions regarding the results, please call me. We appreciate your business and thank you for choosing Transwest Geochem.

Sincerely,

Carlene McCutchen

RE: PPG0141

Dear Carlene:

Enclosed are the results of the sample(s) submitted to our laboratory on July 11, 2006. For your reference, these analyses have been assigned our service request number D0600835.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 103. You may also contact me via email at EWilson@canoga.caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Ed Wilson
Project Chemist

NELAP Accredited ACIL Seal of Excellence Award 100% Recycled

Current CAS Redding Accreditation Programs

Federal and National Programs

- U.S Air Force, Air Force Center for Environmental Excellence (AFCEE)
  Approved laboratory for Wastewater and Hazardous Waste
- U.S. Army Corps of Engineers – MRD, HTRW Mandatory Center of Expertise
  Validated for Wastewater and Hazardous Waste
- Department of the Navy, Naval Facilities Engineering Service Center (NFESC)
  Approved laboratory for Wastewater and Hazardous Waste

State and Local Programs

Arizona Data Qualifiers
Revision 2.0, 11/26/2003

Developed by the Sub-committee of the
Arizona Environmental Laboratory Advisory Committee

Microbiology:
A1 = Too numerous to count.
A2 = Sample incubation period exceeded method requirement.
A3 = Sample incubation period was shorter than method requirement.
A4 = Target organism detected in associated method blank.
A5 = Incubator/water bath temperature was outside method requirements.
A6 = Target organism not detected in associated positive control.
A7 = Micro sample received without adequate headspace.

Method/calibration blank:
B1 = Target analyte detected in method blank at or above the method reporting limit.
B2 = Non-target analyte detected in method blank and sample, producing interference.
B3 = Target analyte detected in calibration blank at or above the method reporting limit.
B4 = Target analyte detected in blank at/above method acceptance criteria.
B5 = Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL.
B6 = Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL.
B7 = Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank.

Confirmation:
C1 = Confirmatory analysis not performed as required by the method.
C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:
D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

Estimated concentration:
E1 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not possible due to insufficient sample.
E2 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E3 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to holding time requirements.

E4 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL).
E5 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL), but not confirmed by alternate analysis.
E6 = Concentration estimated. Internal standard recoveries did not meet method acceptance criteria.
E7 = Concentration estimated. Internal standard recoveries did not meet laboratory acceptance criteria.
E8 = Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Hold time:
H1 = Sample analysis performed past holding time.
H2 = Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
H3 = Sample was received and analyzed past holding time.
H4 = Sample was extracted past required extraction holding time, but analyzed within analysis holding time.

BOD:
K1 = The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/L. Any reported result is an estimated value.
K2 = The sample dilutions set up for the BOD analysis did not meet the criteria of a residual dissolved oxygen of at least 1 mg/L. Any reported result is an estimated value.
K4 = The seed depletion was outside the method acceptance limits. The reported result is an estimated value.
K5 = The dilution water D.O. depletion was > 0.2 mg/L.
K6 = Glucose/glutamic acid BOD was below method acceptance criteria.
K7 = A discrepancy between the BOD and COD results has been verified by reanalysis of the sample for COD.
K8 = Glucose/glutamic acid BOD was above method acceptance levels.

Laboratory fortified blank/blank spike:

L1 = The associated blank spike recovery was above laboratory acceptance limits.
L2 = The associated blank spike recovery was below laboratory acceptance limits.
L3 = The associated blank spike recovery was above method acceptance limits.
L4 = The associated blank spike recovery was below method acceptance limits.

Matrix spike:
M1 = Matrix spike recovery was high, the method control sample recovery was acceptable.
M2 = Matrix spike recovery was low, the method control sample recovery was acceptable.
M3 = The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
M4 = The analysis of the spiked sample required a dilution such that the spike concentration was diluted below the reporting limit. The method control sample recovery was acceptable.
M5 = Analyte concentration was determined by the method of standard addition (MSA).

M6 = Matrix spike recovery was high. Data reported per ADEQ policy 0154.000.
M7 = Matrix spike recovery was low. Data reported per ADEQ policy 0154.000.

General:
N1 = See case narrative.
N2 = See corrective action report.
N3 = The analysis meets all method requirements. See case narrative.

Sample quality:
Q1 = Sample integrity was not maintained. See case narrative.
Q2 = Sample received with headspace.
Q3 = Sample received with improper chemical preservation.
Q4 = Sample received and analyzed without chemical preservation.
Q5 = Sample received with inadequate chemical preservation, but preserved by the laboratory.
Q6 = Sample was received above recommended temperature.
Q7 = Sample inadequately dechlorinated.
Q8 = Insufficient sample received to meet method QC requirements. Batch QC requirements satisfies ADEQ policies 0154 and 0155.
Q9 = Insufficient sample received to meet method QC requirements.
Q10 = Sample received in inappropriate sample container.
Q11 = Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices.

Duplicates:
R1 = RPD exceeded the method control limit. See case narrative.
R2 = RPD exceeded the laboratory control limit. See case narrative.
R4 = MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
R5 = MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R6 = LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
R7 = LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R8 = Sample RPD exceeded the method control limit.
R9 = Sample RPD exceeded the laboratory control limit.
R10 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems.
R11 = The RPD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used.

Surrogate:
S1 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits.
S3 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample.
S4 = Surrogate recovery was above laboratory and method acceptance limits. No target analytes were detected in the sample.
S5 = Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits.
S6 = Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect.

S7 = Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect.
S8 = The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable.
S10 = Surrogate recovery was above laboratory and method acceptance limits. See Case narrative.
S11 = Surrogate recovery was high. Data reported per ADEQ policy 0154.000.
S12 = Surrogate recovery was low. Data reported per ADEQ policy 0154.000.

Method/analyte discrepancies:
T1 = Method approved by EPA, but not yet licensed by ADHS.
T2 = Cited ADHS licensed method does not contain this analyte as part of method compound list.
T3 = Method not promulgated either by EPA or ADHS.
T4 = Tentatively identified compound. Concentration is estimated and based on the closest internal standard.

Calibration verification:
V1 = CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
V2 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample.
V3 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative.
V4 = CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample.
V5 = CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B.
V6 = Data reported from one-point calibration criteria per ADEQ policy 0155.000.
V7 = Calibration verification recovery was above the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.
V8 = Calibration verification recovery was below the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.

Calibration:
W1 = The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA method 8000B.
W2 = The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C.

CASE NARRATIVE

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	Transwest Geochem, Inc.	**Service Request No.:**	D0600835
Project:	PPG141	**Date Received:**	July 11, 2006
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

Ten water samples were received for analysis at Columbia Analytical Services on July 11, 2006.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Diesel Range Organics by EPA Method 8015B

Surrogate Exceptions:
Triacontane and Octacosane surrogate recoveries were exceeded the current control criteria but within the method guidelines in samples PPG0141-03, PPG0141-06, and PPG0141-09. The control criteria were exceeded also for both surrogates in sample PPG0141-02. It appeared that twice the amount of surrogate solution was added into the sample. A reanalysis was not performed because insufficient sample was available. No further corrective action was possible.

Matrix Spike Recovery Exceptions:
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

Yes ☒ No ☐	OTHER: No other discussion required (discuss X, Y, and Z flags as needed)?

Surrogate Exceptions:
The upper control criterion was exceeded for the following surrogates in samples PPG0141-02, PPG0141-03, PPG0141-06, and PPG0141-09: Triacontane and Octacosane. The error associated with an elevated recovery equates to a high bias. The quality of the sample data is not significantly affected. No further corrective action was appropriate.

Matrix Spike Recovery Exceptions:
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

LABORATORY REPORT

Prepared For: CH2M Hill - Tempe
2625 S. Plaza Drive, Ste. 300
Tempe, AZ 85282
Attention: Jennifer Holland

Project: HW Quarterly / UST Sampling Program

Sampled: 07/10/06
Received: 07/10/06
Issued: 08/02/06 14:48

NELAP #01109CA Arizona DHS#AZ0426

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

CH2M Hill - Tempe 2625 S. Plaza Drive, Ste. 300 Tempe, AZ 85282 Attention: Jennifer Holland	Project ID: HW Quarterly / UST Sampling Program Report Number: PPG0176	Sampled: 07/10/06 Received: 07/10/06

SAMPLE RECEIPT:	Samples were received intact, at 2°C, on ice and with chain of custody documentation.
HOLDING TIMES:	All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
PRESERVATION:	Samples requiring preservation were verified prior to sample analysis.
QA/QC CRITERIA:	All analyses met method criteria, except as noted in the report with data qualifiers.
COMMENTS:	N1: Concentration exceeds the calibration range and therefore result is semi-quantitative. N1a: No results were reported for the MS/MSD. The sample used for the MS/MSD required dilution due to the sample matrix. Because of this, the spike compounds were diluted below the detection limit. N1b: The second source continuing calibration verification analyzed immediately following the calibration curve recovered high and outside of acceptance limits for Vinyl Acetate and TAME. All associated samples are non-detect for these compounds and therefore should not be impacted.
SUBCONTRACTED:	Refer to the last page for specific subcontract laboratory information included in this report.

Sampled: 07/10/06
Received: 07/10/06

DATA QUALIFIERS AND DEFINITIONS

C7	Sample RPD between the primary and confirmatory analysis exceeded 40% per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.
L3	The associated blank spike recovery was above method acceptance limits.
M1	Matrix spike recovery was high, the method control sample recovery was acceptable.
M2	Matrix spike recovery was low, the method control sample recovery was acceptable.
M3	The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
N1	See case narrative.
Q8	Insufficient sample received to meet method QC requirements. Batch QC satisfies ADEQ policies 0154 and 0155.
T2	Cited ADHS licensed method does not contain this analyte as part of method compound list.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

Re: PPG0176
Work Order No.: 0607115

Dear Ken,

Attached is the original Report of Analysis from Columbia Analytical Services, Inc. (AZ0604) for the samples received on 7/11/06. The following analysis was performed:

Method EPA 8015B – Diesel Range Organics

If you have any questions regarding the results, please call me. We appreciate your business and thank you for choosing Transwest Geochem.

Sincerely,

Carlene McCutchen

RE: PPG0176

Dear Carlene:

Enclosed are the results of the sample(s) submitted to our laboratory on July 13, 2006. For your reference, these analyses have been assigned our service request number D0600857.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 103. You may also contact me via email at EWilson@canoga.caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Ed Wilson
Project Chemist

Arizona Data Qualifiers
Revision 2.0, 11/26/2003

Developed by the Sub-committee of the
Arizona Environmental Laboratory Advisory Committee

Microbiology:
A1 = Too numerous to count.
A2 = Sample incubation period exceeded method requirement.
A3 = Sample incubation period was shorter than method requirement.
A4 = Target organism detected in associated method blank.
A5 = Incubator/water bath temperature was outside method requirements.
A6 = Target organism not detected in associated positive control.
A7 = Micro sample received without adequate headspace.

Method/calibration blank:
B1 = Target analyte detected in method blank at or above the method reporting limit.
B2 = Non-target analyte detected in method blank and sample, producing interference.
B3 = Target analyte detected in calibration blank at or above the method reporting limit.
B4 = Target analyte detected in blank at/above method acceptance criteria.
B5 = Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL.
B6 = Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL.
B7 = Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank.

Confirmation:
C1 = Confirmatory analysis not performed as required by the method.
C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:
D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

Estimated concentration:
E1 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not possible due to insufficient sample.
E2 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E3 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to holding time requirements.

E4 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL).
E5 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL), but not confirmed by alternate analysis.
E6 = Concentration estimated. Internal standard recoveries did not meet method acceptance criteria.
E7 = Concentration estimated. Internal standard recoveries did not meet laboratory acceptance criteria.
E8 = Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Hold time:
H1 = Sample analysis performed past holding time.
H2 = Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
H3 = Sample was received and analyzed past holding time.
H4 = Sample was extracted past required extraction holding time, but analyzed within analysis holding time.

BOD:
K1 = The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/L. Any reported result is an estimated value.
K2 = The sample dilutions set up for the BOD analysis did not meet the criteria of a residual dissolved oxygen of at least 1 mg/L. Any reported result is an estimated value.
K4 = The seed depletion was outside the method acceptance limits. The reported result is an estimated value.
K5 = The dilution water D.O. depletion was > 0.2 mg/L.
K6 = Glucose/glutamic acid BOD was below method acceptance criteria.
K7 = A discrepancy between the BOD and COD results has been verified by reanalysis of the sample for COD.
K8 = Glucose/glutamic acid BOD was above method acceptance levels.

Laboratory fortified blank/blank spike:

L1 = The associated blank spike recovery was above laboratory acceptance limits.
L2 = The associated blank spike recovery was below laboratory acceptance limits.
L3 = The associated blank spike recovery was above method acceptance limits.
L4 = The associated blank spike recovery was below method acceptance limits.

Matrix spike:
M1 = Matrix spike recovery was high, the method control sample recovery was acceptable.
M2 = Matrix spike recovery was low, the method control sample recovery was acceptable.
M3 = The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
M4 = The analysis of the spiked sample required a dilution such that the spike concentration was diluted below the reporting limit. The method control sample recovery was acceptable.
M5 = Analyte concentration was determined by the method of standard addition (MSA).

M6 = Matrix spike recovery was high. Data reported per ADEQ policy 0154.000.
M7 = Matrix spike recovery was low. Data reported per ADEQ policy 0154.000.

General:
N1 = See case narrative.
N2 = See corrective action report.
N3 = The analysis meets all method requirements. See case narrative.

Sample quality:
Q1 = Sample integrity was not maintained. See case narrative.
Q2 = Sample received with headspace.
Q3 = Sample received with improper chemical preservation.
Q4 = Sample received and analyzed without chemical preservation.
Q5 = Sample received with inadequate chemical preservation, but preserved by the laboratory.
Q6 = Sample was received above recommended temperature.
Q7 = Sample inadequately dechlorinated.
Q8 = Insufficient sample received to meet method QC requirements. Batch QC requirements satisfies ADEQ policies 0154 and 0155.
Q9 = Insufficient sample received to meet method QC requirements.
Q10 = Sample received in inappropriate sample container.
Q11 = Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices.

Duplicates:
R1 = RPD exceeded the method control limit. See case narrative.
R2 = RPD exceeded the laboratory control limit. See case narrative.
R4 = MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
R5 = MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R6 = LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
R7 = LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R8 = Sample RPD exceeded the method control limit.
R9 = Sample RPD exceeded the laboratory control limit.
R10 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems.
R11 = The RPD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used.

Surrogate:
S1 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits.
S3 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample.
S4 = Surrogate recovery was above laboratory and method acceptance limits. No target analytes were detected in the sample.
S5 = Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits.
S6 = Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect.

S7 = Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect.
S8 = The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable.
S10 = Surrogate recovery was above laboratory and method acceptance limits. See Case narrative.
S11 = Surrogate recovery was high. Data reported per ADEQ policy 0154.000.
S12 = Surrogate recovery was low. Data reported per ADEQ policy 0154.000.

Method/analyte discrepancies:
T1 = Method approved by EPA, but not yet licensed by ADHS.
T2 = Cited ADHS licensed method does not contain this analyte as part of method compound list.
T3 = Method not promulgated either by EPA or ADHS.
T4 = Tentatively identified compound. Concentration is estimated and based on the closest internal standard.

Calibration verification:
V1 = CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
V2 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample.
V3 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative.
V4 = CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample.
V5 = CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B.
V6 = Data reported from one-point calibration criteria per ADEQ policy 0155.000.
V7 = Calibration verification recovery was above the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.
V8 = Calibration verification recovery was below the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.

Calibration:
W1 = The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA method 8000B.
W2 = The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C.

Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

Ten water samples were received for analysis at Columbia Analytical Services on July 13, 2006.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Diesel Range Organics by EPA Method 8015B

Continuing Calibration Verification Exceptions:
The upper control criterion was exceeded for TPH-Diesel in closing Continuing Calibration Verifications F0722013 and F0725010. Since the apparent problem equates to a potential high bias, the data quality is not significantly affected. No further corrective action was necessary.

Matrix Spike Recovery Exceptions:
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

Elevated Method Reporting Limits:
Sample PPG0176-06 required dilution due to the presence of elevated levels of target analyte. The reporting limits are adjusted to reflect the dilution.

Approved by: _____ **Date:** 7/27/06

LABORATORY REPORT

Prepared For: CH2M Hill - Tempe
2625 S. Plaza Drive, Ste. 300
Tempe, AZ 85282
Attention: Jennifer Holland

Project: Sky Harbor / HW Quarterly / UST Sampling Program

Sampled: 07/12/06
Received: 07/12/06
Issued: 07/30/06 09:40

NELAP #01109CA Arizona DHS#AZ0426

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

CASE NARRATIVE

LABORATORY ID	CLIENT ID	MATRIX
PPG0291-01	TB-071206	Water
PPG0291-02	BC-7A-6B3	Water
PPG0291-03	PL-105A-6B3	Water

SAMPLE RECEIPT: Samples were received intact, at 3°C, on ice and with chain of custody documentation.

HOLDING TIMES: All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.

PRESERVATION: Samples requiring preservation were verified prior to sample analysis.

QA/QC CRITERIA: All analyses met method criteria, except as noted in the report with data qualifiers.

COMMENTS: N1: The second source continuing calibration verification analyzed immediately following the calibration recovered high and outside of acceptance limits for Vinyl Acetate. All associated samples are non-detect for Vinyl Acetate and therefore should not be impacted.
R1: The RPD exceeded the method control limit.

SUBCONTRACTED: Refer to the last page for specific subcontract laboratory information included in this report.

DATA QUALIFIERS AND DEFINITIONS

L3	The associated blank spike recovery was above method acceptance limits.
N1	See case narrative.
R1	RPD exceeded the method control limit. See case narrative.
R6	LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

Re: PPG0291
Work Order No.: 0607184

Dear Ken,

Attached is the original Report of Analysis from Columbia Analytical Services, Inc. (AZ0604) for the samples received on 7/13/06. The following analysis was performed:

Method EPA 8015B – Diesel Range Organics

If you have any questions regarding the results, please call me. We appreciate your business and thank you for choosing Transwest Geochem.

Sincerely,

Skip Harden
Project Manager

August 03, 2006

Service Request No: D0600869

Carlene McCutcheon
Transwest Geochem, Incorporated
3725 East Atlanta Avenue
Suite 2
Phoenix, AZ 85040-2960

RE: PPG0291

Dear Carlene:

Enclosed are the results of the sample(s) submitted to our laboratory on July 14, 2006. For your reference, these analyses have been assigned our service request number D0600869.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 103. You may also contact me via email at EWilson@canoga.caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Ed Wilson
Project Chemist

NELAP Accredited ACIL Seal of Excellence Award 100% Recycled

Current CAS Redding Accreditation Programs

Federal and National Programs

- U.S Air Force, Air Force Center for Environmental Excellence (AFCEE)
  Approved laboratory for Wastewater and Hazardous Waste
- U.S. Army Corps of Engineers – MRD, HTRW Mandatory Center of Expertise
  Validated for Wastewater and Hazardous Waste
- Department of the Navy, Naval Facilities Engineering Service Center (NFESC)
  Approved laboratory for Wastewater and Hazardous Waste

State and Local Programs

- State of Alaska, Department of Environmental Conservation
  Approved Laboratory for Contaminated Sites
  Lab ID UST-001

Arizona Data Qualifiers
Revision 2.0, 11/26/2003

Developed by the Sub-committee of the
Arizona Environmental Laboratory Advisory Committee

Microbiology:
A1 = Too numerous to count.
A2 = Sample incubation period exceeded method requirement.
A3 = Sample incubation period was shorter than method requirement.
A4 = Target organism detected in associated method blank.
A5 = Incubator/water bath temperature was outside method requirements.
A6 = Target organism not detected in associated positive control.
A7 = Micro sample received without adequate headspace.

Method/calibration blank:
B1 = Target analyte detected in method blank at or above the method reporting limit.
B2 = Non-target analyte detected in method blank and sample, producing interference.
B3 = Target analyte detected in calibration blank at or above the method reporting limit.
B4 = Target analyte detected in blank at/above method acceptance criteria.
B5 = Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL.
B6 = Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL.
B7 = Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank.

Confirmation:
C1 = Confirmatory analysis not performed as required by the method.
C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:
D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

Estimated concentration:
E1 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not possible due to insufficient sample.
E2 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E3 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to holding time requirements.

E4 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL).
E5 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL), but not confirmed by alternate analysis.
E6 = Concentration estimated. Internal standard recoveries did not meet method acceptance criteria.
E7 = Concentration estimated. Internal standard recoveries did not meet laboratory acceptance criteria.
E8 = Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Hold time:
H1 = Sample analysis performed past holding time.
H2 = Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
H3 = Sample was received and analyzed past holding time.
H4 = Sample was extracted past required extraction holding time, but analyzed within analysis holding time.

BOD:
K1 = The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/L. Any reported result is an estimated value.
K2 = The sample dilutions set up for the BOD analysis did not meet the criteria of a residual dissolved oxygen of at least 1 mg/L. Any reported result is an estimated value.
K4 = The seed depletion was outside the method acceptance limits. The reported result is an estimated value.
K5 = The dilution water D.O. depletion was > 0.2 mg/L.
K6 = Glucose/glutamic acid BOD was below method acceptance criteria.
K7 = A discrepancy between the BOD and COD results has been verified by reanalysis of the sample for COD.
K8 = Glucose/glutamic acid BOD was above method acceptance levels.

Laboratory fortified blank/blank spike:

L1 = The associated blank spike recovery was above laboratory acceptance limits.
L2 = The associated blank spike recovery was below laboratory acceptance limits.
L3 = The associated blank spike recovery was above method acceptance limits.
L4 = The associated blank spike recovery was below method acceptance limits.

Matrix spike:
M1 = Matrix spike recovery was high, the method control sample recovery was acceptable.
M2 = Matrix spike recovery was low, the method control sample recovery was acceptable.
M3 = The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
M4 = The analysis of the spiked sample required a dilution such that the spike concentration was diluted below the reporting limit. The method control sample recovery was acceptable.
M5 = Analyte concentration was determined by the method of standard addition (MSA).

M6 = Matrix spike recovery was high. Data reported per ADEQ policy 0154.000.
M7 = Matrix spike recovery was low. Data reported per ADEQ policy 0154.000.

General:
N1 = See case narrative.
N2 = See corrective action report.
N3 = The analysis meets all method requirements. See case narrative.

Sample quality:
Q1 = Sample integrity was not maintained. See case narrative.
Q2 = Sample received with headspace.
Q3 = Sample received with improper chemical preservation.
Q4 = Sample received and analyzed without chemical preservation.
Q5 = Sample received with inadequate chemical preservation, but preserved by the laboratory.
Q6 = Sample was received above recommended temperature.
Q7 = Sample inadequately dechlorinated.
Q8 = Insufficient sample received to meet method QC requirements. Batch QC requirements satisfies ADEQ policies 0154 and 0155.
Q9 = Insufficient sample received to meet method QC requirements.
Q10 = Sample received in inappropriate sample container.
Q11 = Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices.

Duplicates:
R1 = RPD exceeded the method control limit. See case narrative.
R2 = RPD exceeded the laboratory control limit. See case narrative.
R4 = MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
R5 = MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R6 = LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
R7 = LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R8 = Sample RPD exceeded the method control limit.
R9 = Sample RPD exceeded the laboratory control limit.
R10 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems.
R11 = The RPD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used.

Surrogate:
S1 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits.
S3 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample.
S4 = Surrogate recovery was above laboratory and method acceptance limits. No target analytes were detected in the sample.
S5 = Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits.
S6 = Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect.

S7 = Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect.
S8 = The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable.
S10 = Surrogate recovery was above laboratory and method acceptance limits. See Case narrative.
S11 = Surrogate recovery was high. Data reported per ADEQ policy 0154.000.
S12 = Surrogate recovery was low. Data reported per ADEQ policy 0154.000.

Method/analyte discrepancies:
T1 = Method approved by EPA, but not yet licensed by ADHS.
T2 = Cited ADHS licensed method does not contain this analyte as part of method compound list.
T3 = Method not promulgated either by EPA or ADHS.
T4 = Tentatively identified compound. Concentration is estimated and based on the closest internal standard.

Calibration verification:
V1 = CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
V2 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample.
V3 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative.
V4 = CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample.
V5 = CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B.
V6 = Data reported from one-point calibration criteria per ADEQ policy 0155.000.
V7 = Calibration verification recovery was above the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.
V8 = Calibration verification recovery was below the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.

Calibration:
W1 = The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA method 8000B.
W2 = The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C.

Project: PPG0291

Service Request: D0600869

SAMPLE CROSS-REFERENCE

SAMPLE #	CLIENT SAMPLE ID	DATE	TIME
D0600869-001	PPG0291-02	07/12/06	10:20
D0600869-002	PPG0291-03	07/12/06	12:30

CASE NARRATIVE

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	Transwest Geochem, Inc.	**Service Request No.:**	D0600869
Project:	PPC/PPD	**Date Received:**	July 14, 2006
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

Two water samples were received for analysis at Columbia Analytical Services on July 14, 2006.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Diesel Range Organics by EPA Method 8015B

Method Blank Exceptions:
The Method Blank DWB10720 contained low levels of contaminants in Diesel range above the Method Reporting Limit (MRL). In accordance with CAS QA/QC policy, all sample results less than twenty times the level found in the Method Blank are flagged as estimated. The samples were not re-extracted and reanalyzed because insufficient sample remained for additional testing.

Surrogate Exceptions:
The upper control criterion was exceeded for the following surrogates in Method Blank DWB10720 and Laboratory Control Sample DWB10720LCS. However all these recoveries were within the method guidelines. The quality of the sample data is not significantly affected. No further corrective action was appropriate.

Matrix Spike Recovery Exceptions:
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

Lab Control Sample Exceptions:
The upper control criterion was exceeded for the following analyte in Laboratory Control Sample (LCS) DWB10720LCS: TPH-Diesel. However, the Duplicate Laboratory Control Sample had acceptable results indicating the analytical batch was in control. The error associated with elevated recovery equates to a high bias. The sample data is not significantly affected. No further corrective action was appropriate.

Analysis	Expiration	Comments	
Sample ID: PPG0291-02 Water	**Sampled: 07/12/06 10:20**		
8015B MOD-Low Level-O	07/19/06 10:20	sub to Transwest, need transfer file for EDD	pH
Containers Supplied:			
1 L Amber (PPG0291-02D)			1
1 L Amber (PPG0291-02E)			2
Sample ID: PPG0291-03 Water	**Sampled: 07/12/06 12:30**		
8015B MOD-Low Level-O	07/19/06 12:30	sub to Transwest, need transfer file for EDD	
Containers Supplied:			
1 L Amber (PPG0291-03D)			2
1 L Amber (PPG0291-03E)			2

SAMPLE INTEGRITY:

All containers intact: ☑ Yes ☐ No
Custody Seals Present: ☐ Yes ☑ No
Sample labels/COC agree: ☑ Yes ☐ No
Samples Preserved Properly: ☑ Yes ☐ No
Samples Received On Ice:: ☑ Yes ☐ No
Samples Received at (temp): 2.9

LABORATORY REPORT

Prepared For: CH2M Hill - Tempe
2625 S. Plaza Drive, Ste. 300
Tempe, AZ 85282
Attention: Jennifer Holland

Project: Sky Harbor / HW Quarterly / Monthly UST Sampling

Sampled: 07/19/06
Received: 07/19/06
Issued: 08/08/06 12:37

NELAP #01109CA Arizona DHS#AZ0426

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

CASE NARRATIVE

LABORATORY ID	CLIENT ID	MATRIX
PPG0518-01	PL-501-6C1	Water
PPG0518-02	ASE-125A-6C1	Water
PPG0518-03	ASE-126A-6C1	Water
PPG0518-04	PL-502-6C1	Water
PPG0518-05	TB-071906	Water

SAMPLE RECEIPT: Samples were received intact, at 3°C, on ice and with chain of custody documentation.

HOLDING TIMES: All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.

PRESERVATION: Samples requiring preservation were verified prior to sample analysis.

QA/QC CRITERIA: All analyses met method criteria, except as noted in the report with data qualifiers.

COMMENTS: No significant observations were made.

SUBCONTRACTED: Refer to the last page for specific subcontract laboratory information included in this report.

Re: PPG0518
Work Order No.: 0607291

Dear Ken,

Attached is the original Report of Analysis from Columbia Analytical Services, Inc. (AZ0604) for the samples received on 7/19/06. The following analysis was performed:

Method EPA 8015B – Diesel Range Organics

If you have any questions regarding the results, please call me. We appreciate your business and thank you for choosing Transwest Geochem.

Sincerely,

Skip Harden
Project Manager

RE: PPG0518

Dear Carlene:

Enclosed are the results of the sample(s) submitted to our laboratory on July 21, 2006. For your reference, these analyses have been assigned our service request number D0600924.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 103. You may also contact me via email at EWilson@canoga.caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Ed Wilson
Project Chemist

Arizona Data Qualifiers

Revision 2.0, 11/26/2003

Developed by the Sub-committee of the
Arizona Environmental Laboratory Advisory Committee

Microbiology:

A1 = Too numerous to count.
A2 = Sample incubation period exceeded method requirement.
A3 = Sample incubation period was shorter than method requirement.
A4 = Target organism detected in associated method blank.
A5 = Incubator/water bath temperature was outside method requirements.
A6 = Target organism not detected in associated positive control.
A7 = Micro sample received without adequate headspace.

Method/calibration blank:

B1 = Target analyte detected in method blank at or above the method reporting limit.
B2 = Non-target analyte detected in method blank and sample, producing interference.
B3 = Target analyte detected in calibration blank at or above the method reporting limit.
B4 = Target analyte detected in blank at/above method acceptance criteria.
B5 = Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL.
B6 = Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL.
B7 = Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank.

Confirmation:

C1 = Confirmatory analysis not performed as required by the method.
C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:

D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

Estimated concentration:

E1 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not possible due to insufficient sample.
E2 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E3 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to holding time requirements.

E4 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL).
E5 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL), but not confirmed by alternate analysis.
E6 = Concentration estimated. Internal standard recoveries did not meet method acceptance criteria.
E7 = Concentration estimated. Internal standard recoveries did not meet laboratory acceptance criteria.
E8 = Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Hold time:
H1 = Sample analysis performed past holding time.
H2 = Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
H3 = Sample was received and analyzed past holding time.
H4 = Sample was extracted past required extraction holding time, but analyzed within analysis holding time.

BOD:
K1 = The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/L. Any reported result is an estimated value.
K2 = The sample dilutions set up for the BOD analysis did not meet the criteria of a residual dissolved oxygen of at least 1 mg/L. Any reported result is an estimated value.
K4 = The seed depletion was outside the method acceptance limits. The reported result is an estimated value.
K5 = The dilution water D.O. depletion was > 0.2 mg/L.
K6 = Glucose/glutamic acid BOD was below method acceptance criteria.
K7 = A discrepancy between the BOD and COD results has been verified by reanalysis of the sample for COD.
K8 = Glucose/glutamic acid BOD was above method acceptance levels.

Laboratory fortified blank/blank spike:

L1 = The associated blank spike recovery was above laboratory acceptance limits.
L2 = The associated blank spike recovery was below laboratory acceptance limits.
L3 = The associated blank spike recovery was above method acceptance limits.
L4 = The associated blank spike recovery was below method acceptance limits.

Matrix spike:
M1 = Matrix spike recovery was high, the method control sample recovery was acceptable.
M2 = Matrix spike recovery was low, the method control sample recovery was acceptable.
M3 = The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
M4 = The analysis of the spiked sample required a dilution such that the spike concentration was diluted below the reporting limit. The method control sample recovery was acceptable.
M5 = Analyte concentration was determined by the method of standard addition (MSA).

M6 = Matrix spike recovery was high. Data reported per ADEQ policy 0154.000.
M7 = Matrix spike recovery was low. Data reported per ADEQ policy 0154.000.

General:
N1 = See case narrative.
N2 = See corrective action report.
N3 = The analysis meets all method requirements. See case narrative.

Sample quality:
Q1 = Sample integrity was not maintained. See case narrative.
Q2 = Sample received with headspace.
Q3 = Sample received with improper chemical preservation.
Q4 = Sample received and analyzed without chemical preservation.
Q5 = Sample received with inadequate chemical preservation, but preserved by the laboratory.
Q6 = Sample was received above recommended temperature.
Q7 = Sample inadequately dechlorinated.
Q8 = Insufficient sample received to meet method QC requirements. Batch QC requirements satisfies ADEQ policies 0154 and 0155.
Q9 = Insufficient sample received to meet method QC requirements.
Q10 = Sample received in inappropriate sample container.
Q11 = Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices.

Duplicates:
R1 = RPD exceeded the method control limit. See case narrative.
R2 = RPD exceeded the laboratory control limit. See case narrative.
R4 = MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
R5 = MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R6 = LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
R7 = LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R8 = Sample RPD exceeded the method control limit.
R9 = Sample RPD exceeded the laboratory control limit.
R10 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems.
R11 = The RPD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used.

Surrogate:
S1 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits.
S3 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample.
S4 = Surrogate recovery was above laboratory and method acceptance limits. No target analytes were detected in the sample.
S5 = Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits.
S6 = Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect.

S7 = Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect.
S8 = The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable.
S10 = Surrogate recovery was above laboratory and method acceptance limits. See Case narrative.
S11 = Surrogate recovery was high. Data reported per ADEQ policy 0154.000.
S12 = Surrogate recovery was low. Data reported per ADEQ policy 0154.000.

Method/analyte discrepancies:
T1 = Method approved by EPA, but not yet licensed by ADHS.
T2 = Cited ADHS licensed method does not contain this analyte as part of method compound list.
T3 = Method not promulgated either by EPA or ADHS.
T4 = Tentatively identified compound. Concentration is estimated and based on the closest internal standard.

Calibration verification:
V1 = CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
V2 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample.
V3 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative.
V4 = CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample.
V5 = CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B.
V6 = Data reported from one-point calibration criteria per ADEQ policy 0155.000.
V7 = Calibration verification recovery was above the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.
V8 = Calibration verification recovery was below the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.

Calibration:
W1 = The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA method 8000B.
W2 = The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C.

Client: Transwest Geochem, Incorporated
Project: PPG0518

CASE NARRATIVE

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	Transwest Geochem, Inc.	**Service Request No.:**	D0600924
Project:	PPG0518	**Date Received:**	July 21. 2006
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

Three water samples were received for analysis at Columbia Analytical Services on July 21. 2006.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Diesel Range Organics by EPA Method 8015B

Continuing Calibration Verification Exceptions:
The upper control criterion was exceeded for TPH-Diesel in Continuing Calibration Verification (CCV) F0726014 and F0801018. Triacontane and Octacosane were also exceeded the CCV criteria in closing CCV F0801018. The field samples analyzed in this sequence did not contain TPH-Diesel. Since the apparent problem equates to a potential high bias, the data quality is not affected. No further corrective action was required.

Lab Control Sample Exceptions:
The spike recovery for TPH-Diesel in Laboratory Control Sample (LCS) DWB10801018 was exceeded current control criterion but within the method guidelines. The analyte in question was not detected in the associated field samples. The error associated with elevated recovery equates to a high bias. The sample data is not significantly affected. No further corrective action was appropriate.

DATA QUALIFIERS AND DEFINITIONS

L4	The associated blank spike recovery was below method acceptance limits.
M1	Matrix spike recovery was high, the method control sample recovery was acceptable.
M2	Matrix spike recovery was low, the method control sample recovery was acceptable.
N1	See case narrative.
Q8	Insufficient sample received to meet method QC requirements. Batch QC satisfies ADEQ policies 0154 and 0155.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

Re: PPI0248
Work Order No.: 0609155

Dear Ken,

Attached is the original Report of Analysis from Columbia Analytical Services, Inc. (AZ0604) for the samples received on 9/12/06. The following analysis was performed:

Method EPA 8015B – Diesel Range Organics

If you have any questions regarding the results, please call me. We appreciate your business and thank you for choosing Transwest Geochem.

Sincerely,

Skip Harden
Project Manager

RE: PPC/PPD PPI0248/0609155

Dear Skip:

Enclosed are the results of the sample(s) submitted to our laboratory on September 13, 2006. For your reference, these analyses have been assigned our service request number D0601341.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 112. You may also contact me via email at mhovanec@redding.caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Michael Hovanec
Project Chemist

Arizona Data Qualifiers

Revision 2.0, 11/26/2003

Developed by the Sub-committee of the
Arizona Environmental Laboratory Advisory Committee

Microbiology:

A1 = Too numerous to count.
A2 = Sample incubation period exceeded method requirement.
A3 = Sample incubation period was shorter than method requirement.
A4 = Target organism detected in associated method blank.
A5 = Incubator/water bath temperature was outside method requirements.
A6 = Target organism not detected in associated positive control.
A7 = Micro sample received without adequate headspace.

Method/calibration blank:

B1 = Target analyte detected in method blank at or above the method reporting limit.
B2 = Non-target analyte detected in method blank and sample, producing interference.
B3 = Target analyte detected in calibration blank at or above the method reporting limit.
B4 = Target analyte detected in blank at/above method acceptance criteria.
B5 = Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL.
B6 = Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL.
B7 = Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank.

Confirmation:

C1 = Confirmatory analysis not performed as required by the method.
C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:

D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

Estimated concentration:

E1 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not possible due to insufficient sample.
E2 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E3 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to holding time requirements.

E4 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL).
E5 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL), but not confirmed by alternate analysis.
E6 = Concentration estimated. Internal standard recoveries did not meet method acceptance criteria.
E7 = Concentration estimated. Internal standard recoveries did not meet laboratory acceptance criteria.
E8 = Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Hold time:
H1 = Sample analysis performed past holding time.
H2 = Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
H3 = Sample was received and analyzed past holding time.
H4 = Sample was extracted past required extraction holding time, but analyzed within analysis holding time.

BOD:
K1 = The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/L. Any reported result is an estimated value.
K2 = The sample dilutions set up for the BOD analysis did not meet the criteria of a residual dissolved oxygen of at least 1 mg/L. Any reported result is an estimated value.
K4 = The seed depletion was outside the method acceptance limits. The reported result is an estimated value.
K5 = The dilution water D.O. depletion was > 0.2 mg/L.
K6 = Glucose/glutamic acid BOD was below method acceptance criteria.
K7 = A discrepancy between the BOD and COD results has been verified by reanalysis of the sample for COD.
K8 = Glucose/glutamic acid BOD was above method acceptance levels.

Laboratory fortified blank/blank spike:

L1 = The associated blank spike recovery was above laboratory acceptance limits.
L2 = The associated blank spike recovery was below laboratory acceptance limits.
L3 = The associated blank spike recovery was above method acceptance limits.
L4 = The associated blank spike recovery was below method acceptance limits.

Matrix spike:
M1 = Matrix spike recovery was high, the method control sample recovery was acceptable.
M2 = Matrix spike recovery was low, the method control sample recovery was acceptable.
M3 = The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
M4 = The analysis of the spiked sample required a dilution such that the spike concentration was diluted below the reporting limit. The method control sample recovery was acceptable.
M5 = Analyte concentration was determined by the method of standard addition (MSA).

M6 = Matrix spike recovery was high. Data reported per ADEQ policy 0154.000.
M7 = Matrix spike recovery was low. Data reported per ADEQ policy 0154.000.

General:
N1 = See case narrative.
N2 = See corrective action report.
N3 = The analysis meets all method requirements. See case narrative.

Sample quality:
Q1 = Sample integrity was not maintained. See case narrative.
Q2 = Sample received with headspace.
Q3 = Sample received with improper chemical preservation.
Q4 = Sample received and analyzed without chemical preservation.
Q5 = Sample received with inadequate chemical preservation, but preserved by the laboratory.
Q6 = Sample was received above recommended temperature.
Q7 = Sample inadequately dechlorinated.
Q8 = Insufficient sample received to meet method QC requirements. Batch QC requirements satisfies ADEQ policies 0154 and 0155.
Q9 = Insufficient sample received to meet method QC requirements.
Q10 = Sample received in inappropriate sample container.
Q11 = Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices.

Duplicates:
R1 = RPD exceeded the method control limit. See case narrative.
R2 = RPD exceeded the laboratory control limit. See case narrative.
R4 = MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
R5 = MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R6 = LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
R7 = LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R8 = Sample RPD exceeded the method control limit.
R9 = Sample RPD exceeded the laboratory control limit.
R10 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems.
R11 = The RPD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used.

Surrogate:
S1 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits.
S3 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample.
S4 = Surrogate recovery was above laboratory and method acceptance limits. No target analytes were detected in the sample.
S5 = Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits.
S6 = Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect.

S7 = Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect.
S8 = The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable.
S10 = Surrogate recovery was above laboratory and method acceptance limits. See Case narrative.
S11 = Surrogate recovery was high. Data reported per ADEQ policy 0154.000.
S12 = Surrogate recovery was low. Data reported per ADEQ policy 0154.000.

Method/analyte discrepancies:
T1 = Method approved by EPA, but not yet licensed by ADHS.
T2 = Cited ADHS licensed method does not contain this analyte as part of method compound list.
T3 = Method not promulgated either by EPA or ADHS.
T4 = Tentatively identified compound. Concentration is estimated and based on the closest internal standard.

Calibration verification:
V1 = CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
V2 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample.
V3 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative.
V4 = CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample.
V5 = CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B.
V6 = Data reported from one-point calibration criteria per ADEQ policy 0155.000.
V7 = Calibration verification recovery was above the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.
V8 = Calibration verification recovery was below the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.

Calibration:
W1 = The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA method 8000B.
W2 = The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C.

SAMPLE CROSS-REFERENCE

D0601341-002	PPI0248-03	09/11/06	09:59

CASE NARRATIVE

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	Transwest Geochem, Incorporated	**Service Request No.:**	D0601341
Project:	PPC/PPD PPI0248	**Date Received:**	09/13/06
Sample Matrix:	Aqueous		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS).This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

2 Aqueous samples were received for analysis at Columbia Analytical Services on 09/13/06.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4 degrees Celsius upon receipt at the laboratory.

Diesel Range Organics by EPA Method 8015B

Matrix Spike Recovery Exceptions:

Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

No anomalies associated with the analysis of these samples by the above-mentioned method were observed.

Approved by: Michael C. Hovan **Date:** 9/28/06

Re: PPI0249
Work Order No.: 0609156

Dear Ken,

Attached is the original Report of Analysis from Columbia Analytical Services, Inc. (AZ0604) for the samples received on 9/12/06. The following analysis was performed:

Method EPA 8015B – Diesel Range Organics

If you have any questions regarding the results, please call me. We appreciate your business and thank you for choosing Transwest Geochem.

Sincerely,

Skip Harden
Project Manager

RE: PPC/PPD PPI0249/0609156

Dear Skip:

Enclosed are the results of the sample(s) submitted to our laboratory on September 13, 2006. For your reference, these analyses have been assigned our service request number D0601342.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 112. You may also contact me via email at mhovanec@redding.caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Michael Hovanec
Project Chemist

Arizona Data Qualifiers
Revision 2.0, 11/26/2003

Developed by the Sub-committee of the
Arizona Environmental Laboratory Advisory Committee

Microbiology:
A1 = Too numerous to count.
A2 = Sample incubation period exceeded method requirement.
A3 = Sample incubation period was shorter than method requirement.
A4 = Target organism detected in associated method blank.
A5 = Incubator/water bath temperature was outside method requirements.
A6 = Target organism not detected in associated positive control.
A7 = Micro sample received without adequate headspace.

Method/calibration blank:
B1 = Target analyte detected in method blank at or above the method reporting limit.
B2 = Non-target analyte detected in method blank and sample, producing interference.
B3 = Target analyte detected in calibration blank at or above the method reporting limit.
B4 = Target analyte detected in blank at/above method acceptance criteria.
B5 = Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL.
B6 = Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL.
B7 = Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank.

Confirmation:
C1 = Confirmatory analysis not performed as required by the method.
C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:
D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

Estimated concentration:
E1 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not possible due to insufficient sample.
E2 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E3 = Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to holding time requirements.

E4 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL).
E5 = Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL), but not confirmed by alternate analysis.
E6 = Concentration estimated. Internal standard recoveries did not meet method acceptance criteria.
E7 = Concentration estimated. Internal standard recoveries did not meet laboratory acceptance criteria.
E8 = Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Hold time:
H1 = Sample analysis performed past holding time.
H2 = Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
H3 = Sample was received and analyzed past holding time.
H4 = Sample was extracted past required extraction holding time, but analyzed within analysis holding time.

BOD:
K1 = The sample dilutions set-up for the BOD analysis did not meet the oxygen depletion criteria of at least 2 mg/L. Any reported result is an estimated value.
K2 = The sample dilutions set up for the BOD analysis did not meet the criteria of a residual dissolved oxygen of at least 1 mg/L. Any reported result is an estimated value.
K4 = The seed depletion was outside the method acceptance limits. The reported result is an estimated value.
K5 = The dilution water D.O. depletion was > 0.2 mg/L.
K6 = Glucose/glutamic acid BOD was below method acceptance criteria.
K7 = A discrepancy between the BOD and COD results has been verified by reanalysis of the sample for COD.
K8 = Glucose/glutamic acid BOD was above method acceptance levels.

Laboratory fortified blank/blank spike:

L1 = The associated blank spike recovery was above laboratory acceptance limits.
L2 = The associated blank spike recovery was below laboratory acceptance limits.
L3 = The associated blank spike recovery was above method acceptance limits.
L4 = The associated blank spike recovery was below method acceptance limits.

Matrix spike:
M1 = Matrix spike recovery was high, the method control sample recovery was acceptable.
M2 = Matrix spike recovery was low, the method control sample recovery was acceptable.
M3 = The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
M4 = The analysis of the spiked sample required a dilution such that the spike concentration was diluted below the reporting limit. The method control sample recovery was acceptable.
M5 = Analyte concentration was determined by the method of standard addition (MSA).

M6 = Matrix spike recovery was high. Data reported per ADEQ policy 0154.000.
M7 = Matrix spike recovery was low. Data reported per ADEQ policy 0154.000.

General:
N1 = See case narrative.
N2 = See corrective action report.
N3 = The analysis meets all method requirements. See case narrative.

Sample quality:
Q1 = Sample integrity was not maintained. See case narrative.
Q2 = Sample received with headspace.
Q3 = Sample received with improper chemical preservation.
Q4 = Sample received and analyzed without chemical preservation.
Q5 = Sample received with inadequate chemical preservation, but preserved by the laboratory.
Q6 = Sample was received above recommended temperature.
Q7 = Sample inadequately dechlorinated.
Q8 = Insufficient sample received to meet method QC requirements. Batch QC requirements satisfies ADEQ policies 0154 and 0155.
Q9 = Insufficient sample received to meet method QC requirements.
Q10 = Sample received in inappropriate sample container.
Q11 = Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices.

Duplicates:
R1 = RPD exceeded the method control limit. See case narrative.
R2 = RPD exceeded the laboratory control limit. See case narrative.
R4 = MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
R5 = MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R6 = LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
R7 = LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R8 = Sample RPD exceeded the method control limit.
R9 = Sample RPD exceeded the laboratory control limit.
R10 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems.
R11 = The RPD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used.

Surrogate:
S1 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits.
S3 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample.
S4 = Surrogate recovery was above laboratory and method acceptance limits. No target analytes were detected in the sample.
S5 = Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits.
S6 = Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect.

S7 = Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect.
S8 = The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable.
S10 = Surrogate recovery was above laboratory and method acceptance limits. See Case narrative.
S11 = Surrogate recovery was high. Data reported per ADEQ policy 0154.000.
S12 = Surrogate recovery was low. Data reported per ADEQ policy 0154.000.

Method/analyte discrepancies:
T1 = Method approved by EPA, but not yet licensed by ADHS.
T2 = Cited ADHS licensed method does not contain this analyte as part of method compound list.
T3 = Method not promulgated either by EPA or ADHS.
T4 = Tentatively identified compound. Concentration is estimated and based on the closest internal standard.

Calibration verification:
V1 = CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
V2 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample.
V3 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative.
V4 = CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample.
V5 = CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B.
V6 = Data reported from one-point calibration criteria per ADEQ policy 0155.000.
V7 = Calibration verification recovery was above the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.
V8 = Calibration verification recovery was below the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.

Calibration:
W1 = The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA method 8000B.
W2 = The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C.

CASE NARRATIVE

COLUMBIA ANALYTICAL SERVICES, INC.

Client: Transwest Geochem, Incorporated
Project: PPC/PPD PPI0249
Sample Matrix: Aqueous

Service Request No.: D0601342
Date Received: 09/13/06

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS).This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

4 Aqueous samples were received for analysis at Columbia Analytical Services on 09/13/06.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4 degrees Celsius upon receipt at the laboratory.

Diesel Range Organics by EPA Method 8015B

Matrix Spike Recovery Exceptions:

Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

No anomalies associated with the analysis of these samples by the above-mentioned method were observed.

DATA QUALIFIERS AND DEFINITIONS

M1	Matrix spike recovery was high, the method control sample recovery was acceptable.
M2	Matrix spike recovery was low, the method control sample recovery was acceptable.
M3	The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
N1	See case narrative.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference
