C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:
D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS).This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

9 Aqueous samples were received for analysis at Columbia Analytical Services on 09/14/06.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4 degrees Celsius upon receipt at the laboratory.

Fuel Characterization by EPA Method 8015B

Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

No anomalies associated with the analysis of these samples were observed.

SAMPLE RECEIPT:	Samples were received intact, at 4°C, on ice and with chain of custody documentation.
HOLDING TIMES:	Not all holding times were met. Results were qualified where the sample analysis did not occur within method specified holding time requirements.
PRESERVATION:	Samples requiring preservation were verified prior to sample analysis.
QA/QC CRITERIA:	All analyses met method criteria, except as noted in the report with data qualifiers.
COMMENTS:	N1: Concentration exceeds the calibration range and therefore result is semi-quantitative. N1a: The LCS/LCSD and MS recovered high and outside of acceptance limits for Vinyl Acetate. All associated samples are non-detect for Vinyl Acetate and therefore should not be impacted.
SUBCONTRACTED:	Refer to the last page for specific subcontract laboratory information included in this report.

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS).This report contains analytical results for samples designated for Tier III data deliverables.

Sample Receipt

1 Aqueous sample was received for analysis at Columbia Analytical Services on 09/19/06.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4 degrees Celsius upon receipt at the laboratory.

Fuel Characterization by EPA Method 8015B

Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

No anomalies associated with the analysis of these samples were observed.

SAMPLE RECEIPT:	Samples were received intact, at 4°C, on ice and with chain of custody documentation.
HOLDING TIMES:	All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.
PRESERVATION:	Samples requiring preservation were verified prior to sample analysis.
QA/QC CRITERIA:	All analyses met method criteria, except as noted in the report with data qualifiers.
COMMENTS:	N1: Concentration exceeds the calibration range and therefore result is semi-quantitative. N1a: The LCSD, MS and MSD recovered high and outside of acceptance limits for Acetone and Vinyl Acetate. All associated samples are non-detect for these compounds and there for should not be impacted. The second source continuing calibration verification analyzed immediately following the calibration recovered high and outside of acceptance limits for Vinyl Acetate. All associated samples are non-detect for Vinyl Acetate and therefore should not be impacted.

L3	The associated blank spike recovery was above method acceptance limits.
M1	Matrix spike recovery was high, the method control sample recovery was acceptable.
M3	The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
N1	See case narrative.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS).This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

2 Aqueous samples were received for analysis at Columbia Analytical Services on 09/20/06.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4 degrees Celsius upon receipt at the laboratory.

Diesel Range Organics by EPA Method 8015B

No anomalies associated with the analysis of these samples by the above-mentioned method were observed.

Matrix Spike Recovery Exceptions:

Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

CH2M Hill - Tempe 2625 S. Plaza Drive, Ste. 300 Tempe, AZ 85282 Attention: Jennifer Holland	Project ID: Honeywell-Sky Harbor-PO# 2959460 Report Number: PPI0665	Sampled: 09/20/06 Received: 09/21/06

SAMPLE RECEIPT:	Samples were received intact, at 4°C, on ice and with chain of custody documentation.
HOLDING TIMES:	Not all holding times were met. Results were qualified where the sample analysis did not occur within method specified holding time requirements. Samples PPI0665-04 and PPI0665-05 were analyzed past hold time. As a result of instrument problems, too many samples expiring and not enough capacity to run them all before expiration. Samples were attempted to be run, but due to a GC commuication error the seqence stopped and never acquired. Therefore these two samples were run past the hold time.
PRESERVATION:	Samples requiring preservation were verified prior to sample analysis.
QA/QC CRITERIA:	All analyses met method criteria, except as noted in the report with data qualifiers.
COMMENTS:	N1: Concentration exceeds the calibration range and therefore result is semi-quantitative. N1a: The MS/MSD recovered high for Vinyl Acetate. Samples were ND therefore data not impacted.
SUBCONTRACTED:	Refer to the last page for specific subcontract laboratory information included in this report.

DATA QUALIFIERS AND DEFINITIONS

C6	Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
H1	Sample analysis performed past holding time.
L3	The associated blank spike recovery was above method acceptance limits.
M1	Matrix spike recovery was high, the method control sample recovery was acceptable.
M2	Matrix spike recovery was low, the method control sample recovery was acceptable.
M3	The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
N1	See case narrative.
Q8	Insufficient sample received to meet method QC requirements. Batch QC satisfies ADEQ policies 0154 and 0155.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

DATA QUALIFIERS AND DEFINITIONS

C6	Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
H2	Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
M1	Matrix spike recovery was high, the method control sample recovery was acceptable.
M2	Matrix spike recovery was low, the method control sample recovery was acceptable.
M3	The accuracy of the spike recovery value is reduced since the analyte concentration in the sample is disproportionate to spike level. The method control sample recovery was acceptable.
N1	See case narrative.
Q8	Insufficient sample received to meet method QC requirements. Batch QC satisfies ADEQ policies 0154 and 0155.
ND	Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD	Relative Percent Difference

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS).This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

12 Aqueous samples were received for analysis at Columbia Analytical Services on 09/26/06.

The following discrepancies were noted upon initial sample inspection and documented on the cooler receipt/preservation form included in this data package:

* The samples arrived wet and some of the labels had rubbed off.

The samples were received in good condition and otherwise consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4 degrees Celsius upon receipt at the laboratory.

Fuel Characterization by EPA Method 8015B

Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

Calibration Range Exceedence:

Sample D0601449-007 required a dilution of 5x due to high levels of DRO in sample.

Q11 = Sample is heterogeneous. Sample homogeneity could not be readily achieved using routine laboratory practices.

Duplicates:
R1 = RPD exceeded the method control limit. See case narrative.
R2 = RPD exceeded the laboratory control limit. See case narrative.
R4 = MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
R5 = MS/MSD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R6 = LFB/LFBD RPD exceeded the method control limit. Recovery met acceptance criteria.
R7 = LFB/LFBD RPD exceeded the laboratory control limit. Recovery met acceptance criteria.
R8 = Sample RPD exceeded the method control limit.
R9 = Sample RPD exceeded the laboratory control limit.
R10 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic problems.
R11 = The RPD calculation for MS/MSD does not provide useful information due to the varying sample weights when Encore samplers/methanol field preserved samples are used.

Surrogate:
S1 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits.
S3 = Surrogate recovery was above laboratory acceptance limits, but within method acceptance limits. No target analytes were detected in the sample.
S4 = Surrogate recovery was above laboratory and method acceptance limits. No target analytes were detected in the sample.
S5 = Surrogate recovery was below laboratory acceptance limits, but within method acceptance limits.
S6 = Surrogate recovery was below laboratory and method acceptance limits. Reextraction and/or reanalysis confirms low recovery caused by matrix effect.

S7 = Surrogate recovery was below laboratory and method acceptance limits. Unable to confirm matrix effect.
S8 = The analysis of the sample required a dilution such that the surrogate recovery calculation does not provide any useful information. The method control sample recovery was acceptable.
S10 = Surrogate recovery was above laboratory and method acceptance limits. See Case narrative.
S11 = Surrogate recovery was high. Data reported per ADEQ policy 0154.000.
S12 = Surrogate recovery was low. Data reported per ADEQ policy 0154.000.

Method/analyte discrepancies:
T1 = Method approved by EPA, but not yet licensed by ADHS.
T2 = Cited ADHS licensed method does not contain this analyte as part of method compound list.
T3 = Method not promulgated either by EPA or ADHS.
T4 = Tentatively identified compound. Concentration is estimated and based on the closest internal standard.

Calibration verification:
V1 = CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.
V2 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample. The sample could not be reanalyzed due to insufficient sample.
V3 = CCV recovery was above method acceptance limits. This target analyte was detected in the sample, but the sample was not reanalyzed. See case narrative.
V4 = CCV recovery was below method acceptance limits. The sample could not be reanalyzed due to insufficient sample.
V5 = CCV recovery after a group of samples was above acceptance limits. This target analyte was not detected in the sample. Acceptable per EPA Method 8000B.
V6 = Data reported from one-point calibration criteria per ADEQ policy 0155.000.
V7 = Calibration verification recovery was above the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.
V8 = Calibration verification recovery was below the method control limit for this analyte, however the average % difference or % drift for all the analytes met method criteria.

Calibration:
W1 = The % RSD for this compound was above 20%. The average % RSD for all compounds in the calibration met the 20% criteria as specified in EPA method 8000B.
W2 = The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria as specified in EPA method 8260B/8270C.

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS).This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

5 Aqueous samples were received for analysis at Columbia Analytical Services on 09/26/06.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4 degrees Celsius upon receipt at the laboratory.

Diesel Range Organics by EPA Method 8015B

Surrogate Exceptions:

The lower control criteria were exceeded for the following surrogates in sample PPI0752-05: Triacontane and Octacosane. Sample could not be re-extracted and re-analyzed due to limited sample amount available. However, the associated QC recoveries of surrogate compounds were in control, indicating the analysis was in control. The surrogate outlier is flagged accordingly. No further corrective action was appropriate.

Matrix Spike Recovery Exceptions:

Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

Revision 2.0, 11/26/2003

Developed by the Sub-committee of the
Arizona Environmental Laboratory Advisory Committee

Microbiology:
A1 = Too numerous to count.
A2 = Sample incubation period exceeded method requirement.
A3 = Sample incubation period was shorter than method requirement.
A4 = Target organism detected in associated method blank.
A5 = Incubator/water bath temperature was outside method requirements.
A6 = Target organism not detected in associated positive control.
A7 = Micro sample received without adequate headspace.

Method/calibration blank:
B1 = Target analyte detected in method blank at or above the method reporting limit.
B2 = Non-target analyte detected in method blank and sample, producing interference.
B3 = Target analyte detected in calibration blank at or above the method reporting limit.
B4 = Target analyte detected in blank at/above method acceptance criteria.
B5 = Target analyte detected in method blank at or above the method reporting limit, but below trigger level or MCL.
B6 = Target analyte detected in calibration blank at or above the method reporting limit, but below trigger level or MCL.
B7 = Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the method blank.

Confirmation:
C1 = Confirmatory analysis not performed as required by the method.
C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:
D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

A4 = Target organism detected in associated method blank.
A5 = Incubator/water bath temperature was outside method requirements.
A6 = Target organism not detected in associated positive control.
A7 = Micro sample received without adequate headspace.

Method/calibration blank:
B1 = Target analyte detected in method blank at or above the method reporting limit.
B2 = Non-target analyte detected in method blank and sample, producing interference.
B3 = Target analyte detected in calibration blank at or above the method reporting limit.
B4 = Target analyte detected in blank at/above method acceptance criteria.

Confirmation:
C1 = Confirmatory analysis not performed as required by the method.
C3 = Qualitative confirmation performed.
C4 = Confirmatory analysis was past holding time.
C5 = Confirmatory analysis was past holding time. Original result not confirmed.
C6 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported as there was no obvious chromatographic interference.
C7 = Sample RPD between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the lower value was reported due to apparent chromatographic interference.

Dilution:
D1 = Sample required dilution due to matrix.
D2 = Sample required dilution due to high concentration of target analyte.
D3 = Sample dilution required due to insufficient sample.
D4 = Minimum reporting level (MRL) adjusted to reflect sample amount received and analyzed.

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS).This report contains analytical results for samples designated for Tier II data deliverables.

Sample Receipt

6 Aqueous samples were received for analysis at Columbia Analytical Services on 09/28/06.

No discrepancies were noted upon initial sample inspection. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4 degrees Celsius upon receipt at the laboratory.

Fuel Characterization by EPA Method 8015B

Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed in order to report precision data.

No anomalies associated with the analysis of these samples by the above-mentioned method were observed.

Soil Gas Helium Analyses for CH2M Hill

Performed by

Introduction

The text below describes soil gas samples that have been analyzed for helium concentration using gas chromatography (GC) with thermal conduction detection. The samples were collected by CH2M Hill in 0.8 liter stainless steel cans that had been evacuated prior to sampling. The GC analytical method used was sufficient to separate helium from all other common atmospheric constituents, including hydrogen[1]. All samples were collected by CH2M Hill in September and October 2006. They were then shipped by overnight courier to Portland, Oregon and were analyzed on the day they were received.

Sample Handling Procedure

Upon receipt, canisters were pressurized by injecting 1.0 liters of argon into each canister using a gas-tight syringe.

Analysis Method

At the time of analysis, a one-milliliter sample was taken from the canister to be analyzed and injected into a gas sampling valve with a 0.3 mL sample loop. With the GC oven at 30°C, the sample was injected onto a 15m long Carboxen 1010 PLOT column. The temperature was maintained at 30°C for 1.5 minutes until after the helium had eluted, and then raised to 200°C at 25 degrees per minute to remove all other soil gas components.

The GC was calibrated each day with four gas standards (0.02%, 0.1%, 1%, and 10% helium by volume). The standards were prepared by making the appropriate mixture in a one-liter Tedlar bag, then drawing the sample into an evacuated canister in much the same manner as the samples were taken in the field. Each of the canisters was then pressurized with 1.0 liters of argon. A linear calibration curve, passing through the origin, was generated from the standards and used for quantitation of helium in the samples. The calibration data are listed in Table II. The quantitation limit for the analysis was 0.02% helium by volume.

---

[1] We are unaware of any interferences with the helium analysis, and given the significant number of “non-detects” in the samples analyzed, we are confident that nothing interfered with these helium measurements. The objective of these analyses was to eliminate the interferences that occur when helium leak detectors are used in the field to detect helium in soil gas. Those interferences are primarily due to carbon dioxide and methane in soil gas. The GC method is known to eliminate those interferences.

Results

Table I lists the helium analyses for all of the samples received from CH2M Hill (reported as percent helium by volume of the received sample), along with sample time and date and analysis date. In all cases the chromatograms were examined to ensure that integration of the helium peaks was satisfactory and that there were no interferences.
