Major Sources are the sources that have the potential to emit 100 tons per year of any criteria air pollutant. A source is also considered major if it has the potential to emit 10 tons per year of any single Hazardous Air Pollutant or 25 tons per year of any combination of Hazardous Air Pollutants. Examples of these types of sources are Landfills, Lime Plants, Paper Mills, Copper Smelters, Utilities, Compressor Stations, etc.

Minor Sources are the sources that have the potential to emit emission below the tonnage of Major Sources. Examples of these types of sources are Crushing/Screening Plants, Asphalt Batch Plants, Concrete Batch Plants, Dry Cleaners, Crematories, Generator Sources, Cotton Gins, SVEUs, etc.
