

NOTICE TO ADEQ STAKEHOLDERS THAT ARE PERFORMING SOIL REMEDIATION:

The revised Soil Remediation Standards rule which became effective in 2007, included an expiration date for the previous soil remediation standards (i.e. Appendix B). Therefore, in accordance with Arizona Administrative Code (A.A.C.) R18-7-202(E) (see below), as of May 5, 2010 the use of Appendix B soil remediation standards will no longer be allowed and soil remediation projects must then comply with the Appendix A soil remediation standards.

A.A.C. R18-7-202. Applicability

- E. A person who is remediating a site shall comply with the numeric soil remediation standards identified in either Appendix A or Appendix B if both of the following conditions are met. If either subsection (1) or subsection (2) is not met, a person who is remediating a site shall comply with the numeric soil remediation standards identified in Appendix A.
1. The site was characterized before **May 5, 2007**. A site is considered characterized when the laboratory analytical results of the soil samples delineating the nature, degree, and extent of soil contamination have been received by the person conducting the remediation.
 2. The site was remediated or a risk assessment completed before **May 5, 2010**. A risk assessment or remediation is considered completed when site closure, that meets the conditions in R18-7-209, has been requested.
